Marble Colorado

Development Limitations

Legend

- Slopes less than 20 percent, stable slopes and free of flood, avalanche and debris flows.
- Consider development. Site specific studies may indicate local suitability for leaching fields and/or development.
- Severe limitations to leaching fields and/or development. Slopes greater than 20 percent, very unstable slopes, avalanche areas, recent or historic debris flows.

Detailed site investigation by an engineering geologist and geotechnical engineer might find a suitable site even within the high risk areas.
