

May 28, 2014

Dear Reader:

This letter is to inform you that information contained in this report may identify your school[s] as having participated in the HKCS state sample. We understand that some schools and districts prefer to keep this information confidential, and therefore wanted to alert you to this should you choose to share your HKCS reports with others.

As a result of schools in your community being selected in the state sample, data were collected on multiple instruments at both the high school and middle school level. Throughout the report you will see footnotes highlighting on which modules the questions appeared, if your report includes multiple modules. We include these footnotes so that the reader can identify the questions that reflect different proportions of student respondents.

The proportions of high school students that responded to each of the high school instruments in this report are as follows:

Module A (State Selected & Local Administration): 23%

Module B (State Selected Only): 77%

All middle school students responded on Module E (State Selected Only).

The 6th graders included in your report were selected as a part of the state sample and/or the local survey administration you completed with OMNI. The new Colorado unified Healthy Kids Colorado Survey system implemented in the 2013-14 school year does not administer to 6th graders unless your school was selected by CDC for the national sample or if schools make this request. If you have any questions about this, please contact Amy Dillon, School Health Specialist, (amy.dillon@state.co.us), at the Colorado Department of Public Health and Environment for further information.

Should you have any other questions regarding your report(s), please feel free to contact the HKCS team directly.

Sincerely,
Chandra Winder, Project Manager
Manager II

Section I

Introduction to the Healthy Kids Colorado Survey

INTRODUCTION

This report summarizes findings from the Healthy Kids Colorado Survey (HKCS) administered in your school(s) during this school year. The HKCS is designed to assess students' involvement in a wide range of health and risk behaviors as well as students' attitudes about, and exposure to, a set of risk and protective factors that have been shown to affect these behaviors.

Background

The Healthy Kids Colorado Survey (HKCS) was developed to:

- Increase public awareness about health and behavior issues that impact youth
- Create healthy learning environments by improving school health education policies and programs
- Monitor how the priority health behaviors among middle and high school students increase, decrease, or remain the same over time
- Provide local, state, and national comparisons on youth health behaviors
- Educate leaders to shape effective public policy
- Bring funding into the state and local communities
- Meet the data collection and reporting needs of schools and programs receiving funding from multiple federal and state agencies

Specifically, the HKCS collects data that are commonly required by grants and programs offered through the following:

- U.S. Centers for Disease Control and Prevention
- U.S. Substance Abuse and Mental Health Services Administration and the Center for Substance Abuse Prevention
- U.S. Office of Juvenile Justice and Delinquency
- Programs of the Colorado Departments of Human Services (Division of Behavioral Health), Education, Public Health and Environment, Public Safety (Division of Criminal Justice and Office of Juvenile Justice) and Transportation

Survey Measures

The HKCS integrates items from two nationally recognized and validated surveys: the Centers for Disease Control and Prevention's *Youth Risk Behavior Survey (YRBS)* and the *Communities that Care Survey*, developed by the Social Development Research Group, as well as additional items selected by Colorado state agencies. Instruments used to collect data can be viewed on OMNI's website at <http://hkcs.omni.org>. Youth behaviors measured on the HKCS include:

- Substance Use
- Personal Safety/Violence
- School
- Family/Home
- Mental Health
- Future Aspirations
- Physical Health, Activity and Nutrition
- Sexual Behavior (This section only appears on the High School survey)

Risk and Protective Factors

In addition to individual item results, multiple items from the survey are combined to calculate scores on several risk and protective factors. Risk and protective factors are characteristics demonstrated by research to increase or decrease, respectively, the likelihood of unhealthy and problem behaviors. Specifically, risk factors are the characteristics in a young person's environment that, if present, make it more likely that an individual will engage in risky behaviors. Protective factors, on the other hand, buffer against risk, and reduce the likelihood that an individual will engage in these risky behaviors. These risk and protective factors are assessed at four different levels, including the community, school, family, and peer/individual. Risk and protective factors assessed in the HKCS include:

Risk Factors

- Community: Perceived Availability of Drugs
- Community: Laws and Norms Favorable to Drug Use
- Family: Parental Attitudes Favorable to Drug Use
- School: Low Commitment
- Peer-Individual: Early Initiation of Drug Use
- Peer-Individual: Perceived Risk of Drug Use

Protective Factors

- Family: Opportunities for Pro-Social Involvement
- School: Opportunities for Pro-Social Involvement

More information on risk and protective factors can be found in Appendix C.

School Administration and Resources

The survey is administered by participating schools during the regular school year and generally requires 45 minutes for students to complete. In order to promote a smooth administration and to obtain accurate, high-quality data, schools work closely with OMNI Institute to plan their school survey administration. OMNI Institute is a non-profit social science research agency that coordinates the local administration of the HKCS.

To support Colorado's school survey effort, OMNI Institute provides the following services:

- Monitoring common state and federal data reporting requirements of schools and programs
- Assisting school officials in planning school survey administrations
- Supplying school survey materials
- Scanning and analyzing school survey data
- Developing user-friendly reports of HKCS data
- Assisting school officials and local coalition representatives in interpreting HKCS data for funders and stakeholders
- Assisting school officials and local coalition representatives in utilizing data for local program and service planning
- Providing additional analysis on HKCS data

To plan next year's school administration, or for more information regarding available technical support, please contact the survey team at OMNI Institute at survey@omni.org or 1-800-279-2070 ext. 101.

Report Organization

Your school survey report is organized into several major health behavior topics. In many topic areas, a few select survey items are presented in charts to illustrate overall health behaviors and attitudes in the participating sample and differences across grade levels or gender. Tables presenting survey results for all items are also included in each health behavior section. Risk and protective factor scales are reported in a separate section at the end of the report. Please note that because the HKCS contains items from both the Youth Risk Behavior Survey and the Communities that Care Survey, "ATOD" (alcohol, tobacco and other drug use) and "drug use" are used interchangeably throughout this report.

How to Use This Report

The purpose of this report is to provide schools and communities with the information and resources needed to: (a) develop an understanding of youth attitudes and behaviors in your community; (b) identify assets or problem areas among youth in your community; and (c) guide the selection of appropriate programs and prevention activities for your community. Please contact your Regional Prevention Consultant (See Appendix B) or visit the Regional Prevention Services website at www.rpscolorado.org for technical assistance in utilizing this report.

We recommend examining your data in multiple ways:

(1) Look for patterns within your report: As you examine the report, pay attention to the relative percentages of youth reporting various attitudes and behaviors. Although many of these outcomes are not directly comparable and may differ in importance, noting any general patterns across these outcomes can help you identify and focus on what appear to be key problem areas or areas of strength.

(2) Compare your results with other data sources: To compare your community's data with overall state-level data, you may visit the Healthy Kids Colorado Survey webpage:

<http://www.ucdenver.edu/academics/colleges/PublicHealth/community/CEPEG/UnifYouth/Pages/HealthyKidsSurvey.aspx>.

(3) Compare your results to previous years' data from your community: If your community participated in the HKCS in previous years, certain items may be comparable across years, enabling you to determine changes over time in key health and risk behaviors in your community. If you are interested in finding out more about cross-year comparisons of data or have any other questions, please contact the survey team at survey@omni.org or 1-800-279-2070 ext. 101.

Section II Data Quality

DATA QUALITY

Confidentiality

A standard data suppression policy is used to protect the confidentiality of students so that responses cannot be associated with individual youth. Suppressed responses are not reported in data tables or in charts. When three or fewer students report a behavior or attitude, responses are indicated by “-” in the data tables and charts. In addition, when all or almost all students (within 3 of the total sample) report a behavior or attitude, responses are indicated by “+” in the data tables and charts. There are times when student responses are suppressed within sub-populations (i.e. grade and gender) but are totaled in the “All” category. This will occur when the number within a sub-population is less than three, but across grades and/or gender is large enough that confidentiality does not need to be protected.

Honesty and Data Validity

In general, the majority of students complete most or all of the survey items and research has shown that most students answer honestly. However, sometimes students do not pay adequate attention or do not respond honestly to survey questions. Certain techniques are used to determine when survey responses are inconsistent or dishonest. For example, if a student indicates on one question that he or she has never used tobacco but on another question reports having smoked 10 cigarettes in the last 30 days, the answer will be considered to be inconsistent for the domain of substance use. Students whose responses are inconsistent within a domain are considered ‘missing’ and not included in calculations for that domain, but are included for all other domains. This procedure allows for the inclusion of students who inadvertently respond incorrectly to questions, but are not deliberately dishonest throughout the survey. Data may also be coded as missing if a student does not provide either their age or grade. Students whose responses are inconsistent across three or more domains are considered ‘dishonest’ and removed entirely from the sample. Students are also excluded from the sample if they complete less than 25% of the entire survey. These steps are taken to ensure that the information presented in your report is an accurate reflection of self-reported youth behavior.

Response Rates

High overall response rates are desirable for surveys because they help ensure that the data are representative of a given population (school or community) instead of only the students who complete the survey. There are several factors that influence how representative the data are of a particular school, district, or community. First, for a district or community level report, consider how many schools participated out of all the schools in your district/community. If all or almost all schools participated, then data are more likely to represent the entire population. If only a few schools participated, then data may only represent those particular schools.

Second, consider what percentage of students participated in the survey. In general, the higher the response rate, the more certain you can be that results reflect the behaviors and attitudes of the larger population instead of just the students that took the survey. If you have a response rate over 80%, you can be very confident that results reflect the larger population (the entire school). As response rates decrease, data are considered less representative of the larger population. Response rates of less than 60% may not be able to be generalized to the larger population, and instead may be representative only of the students who participated in the survey.

Finally, examine the item level response rate. Even if overall response rates are high, it is possible that some students completing the survey did not respond to every question. The extent of missing data can influence the interpretation of the results. Therefore, the response rate for each item is provided in the data tables. Similar to the explanation above, if the item response rate is above 80%, the results for that item can be more confidently interpreted as representative of the larger student population, whereas response rates of less than 60% may only be representative of the students who responded to that particular item.

Section III Demographics

Schools Included in Report

District	School	Percentage of Report Sample
GUNNISON WATERSHED RE1J		100.0%
	CRESTED BUTTE COMMUNITY SCHOOL	33.8%
	GUNNISON HIGH SCHOOL	33.8%
	GUNNISON MIDDLE SCHOOL	32.5%
Total Report Sample Percent		100%

Demographics and Data Quality - The response rate for Gunnison Watershed RE-1J = 89.7%

Demographic	Number (N)	N / Total Sample	CDE Enrollment*	CDE N / CDE Enrollment
Total	838	100%	934	100%
Female	416	49.6%	450	48.2%
Male	422	50.4%	484	51.8%
6th Grade	138	16.5%	151	16.2%
7th Grade	143	17.1%	151	16.2%
8th Grade	127	15.2%	148	15.8%
9th Grade	114	13.6%	132	14.1%
10th Grade	99	11.8%	111	11.9%
11th Grade	96	11.5%	106	11.3%
12th Grade	121	14.4%	135	14.5%
Hispanic or Latino	141	16.8%	149	16%
American Indian or Alaska Native	28	3.3%	7	.7%
Asian	10	1.2%	3	.3%
Black or African American	13	1.6%	4	.4%
Native Hawaiian or Other Pacific Islander	12	1.4%	1	.1%
White	651	77.7%	752	80.5%
Multi-ethnic	42	5%	18	1.9%

All data are based only on participating schools

*Enrollment numbers from the Colorado Department of Education (CDE), October 2013 Pupil Membership. Enrollment numbers reflect all students in grades 6-12.

Due to differences in collecting race/ethnicity information, CDE enrollment numbers will total 100% while report categories may total greater than 100%.

This table can be used to better understand the demographic composition of students who took the survey compared to the overall population of their school(s).

1) Survey response rate from your school(s).

The response rate listed at the top of this page is equal to the total number of students that took the survey divided by the total number of students enrolled at the school(s). As noted in the introduction, the higher the response rate, the more representative your data are of the larger school(s) population. Reports with response rates of less than 60% reflect only the students that took the survey and not the larger school(s) population.

2) The demographic composition of the students from your school(s) who took the survey.

The two left hand columns show the total number of students who took the survey, and the demographic composition of these students. This allows you to better understand the grade, gender and race/ethnic breakout of survey respondents.

3) The demographic composition of the larger school(s) total population.

The data in the two right hand columns shows the overall school(s) enrollment according to CDE. Similarly, these data can be used to understand the demographic composition of the school(s) as a whole.

4) How each demographic group that took the survey compares to the number of students in that group that are enrolled in your school(s).

To better understand how students that took the survey compare to the larger student population from the school(s), compare the Sample % with the Enrollment %. Comparing these two percentages can help to judge the quality of your data (e.g., how well it represents the school population). For example, if your school attempted to conduct a full census, you would want Sample %s for each demographic group to be close to the percentage reported in the overall enrollment column in order to accurately reflect that demographic group. Finally, you can also compare the number of students that took the survey within each demographic group to the total number of students in that group overall. Therefore, if 50 females took the survey and there are a total of 100 females enrolled at your school(s), then 50% of the female students participated in the survey.

Demographics

What is the language you use most often at home?

N: 92

Response Rate: 91.1%

Response	Sex	Grade							
		Total	6th	7th	8th	9th	10th	11th	12th
English	Total	88%	-	-	-	+	+	77%	+
	Female	+	-	-	-	+	+	+	+
	Male	85%	-	-	-	+	+	+	+
Spanish	Total	7%	-	-	-	-	-	-	-
	Female	-	-	-	-	-	-	-	-

This question is asked only on the high school versions of the survey. Response rates are calculated based only on the number of 9th-12th grade students who participated.

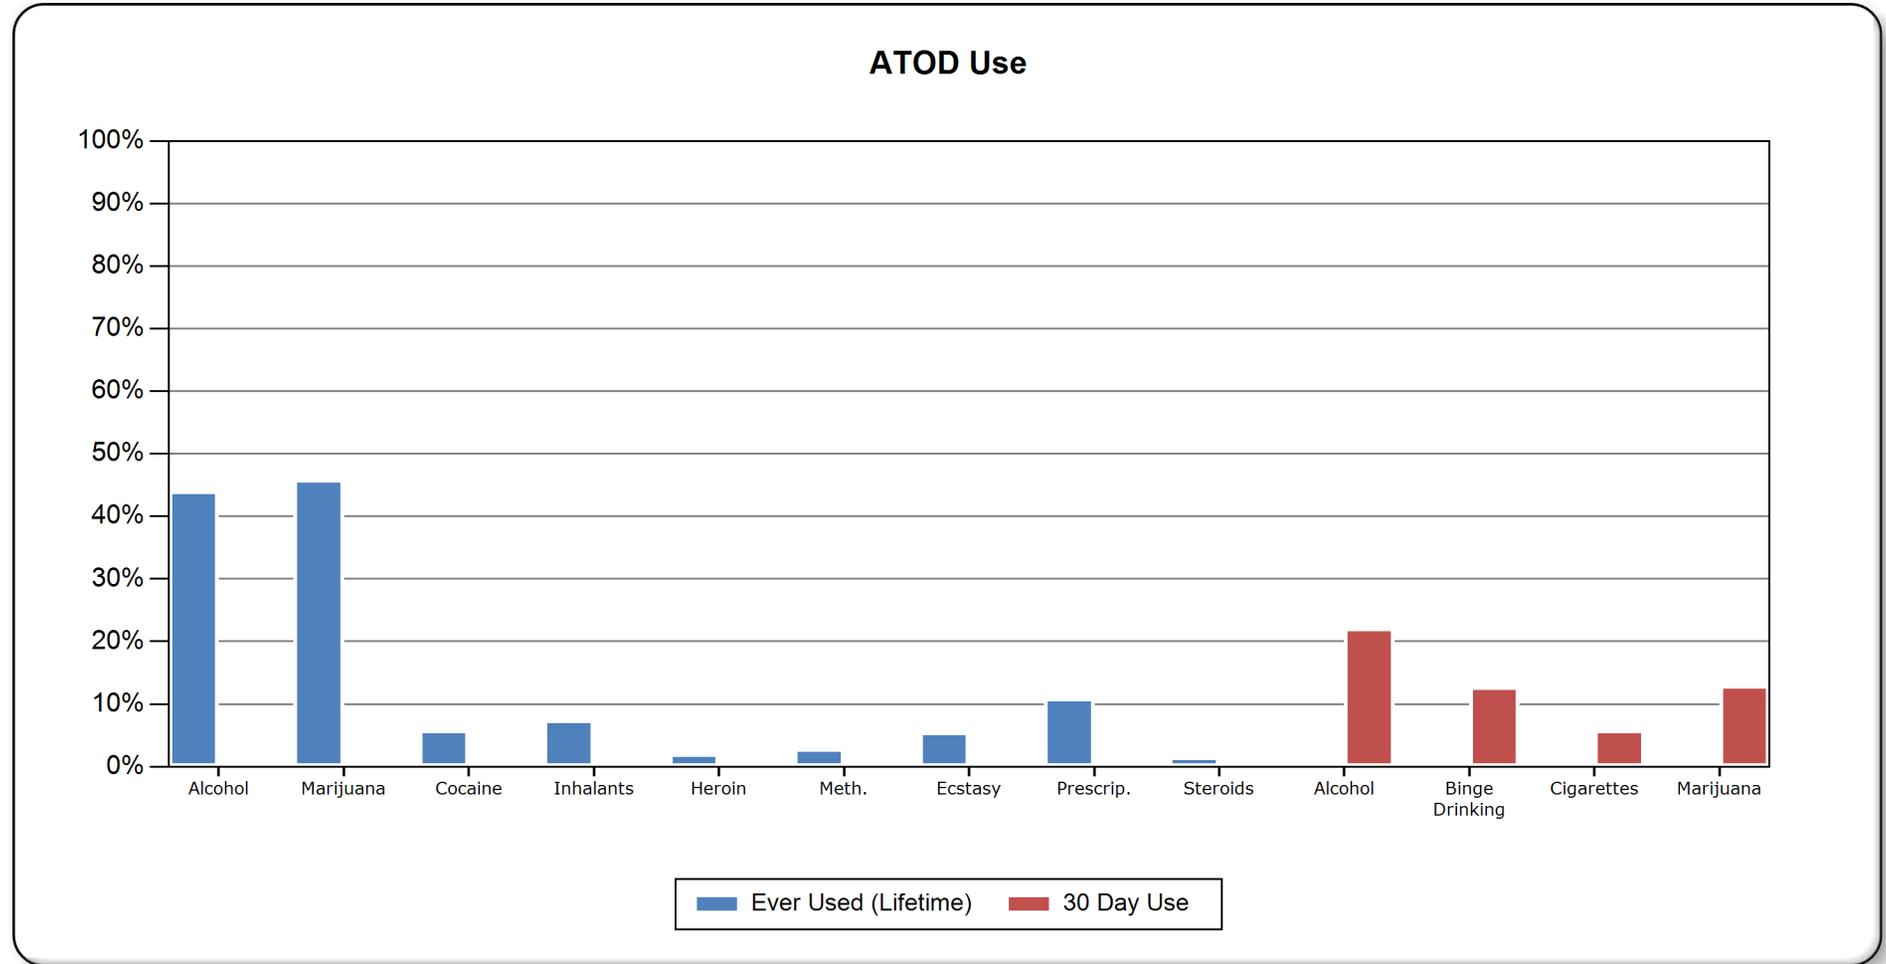

Section IV Survey Results

Substance Use

Substance Use

Grade: All

The "Ever Used (Lifetime)" section of the chart shows the percentage of students who reported using the substance at least once in their lives. The "30-day Use" section shows the percentage of students who reported using the substance at least once in the past 30 days.

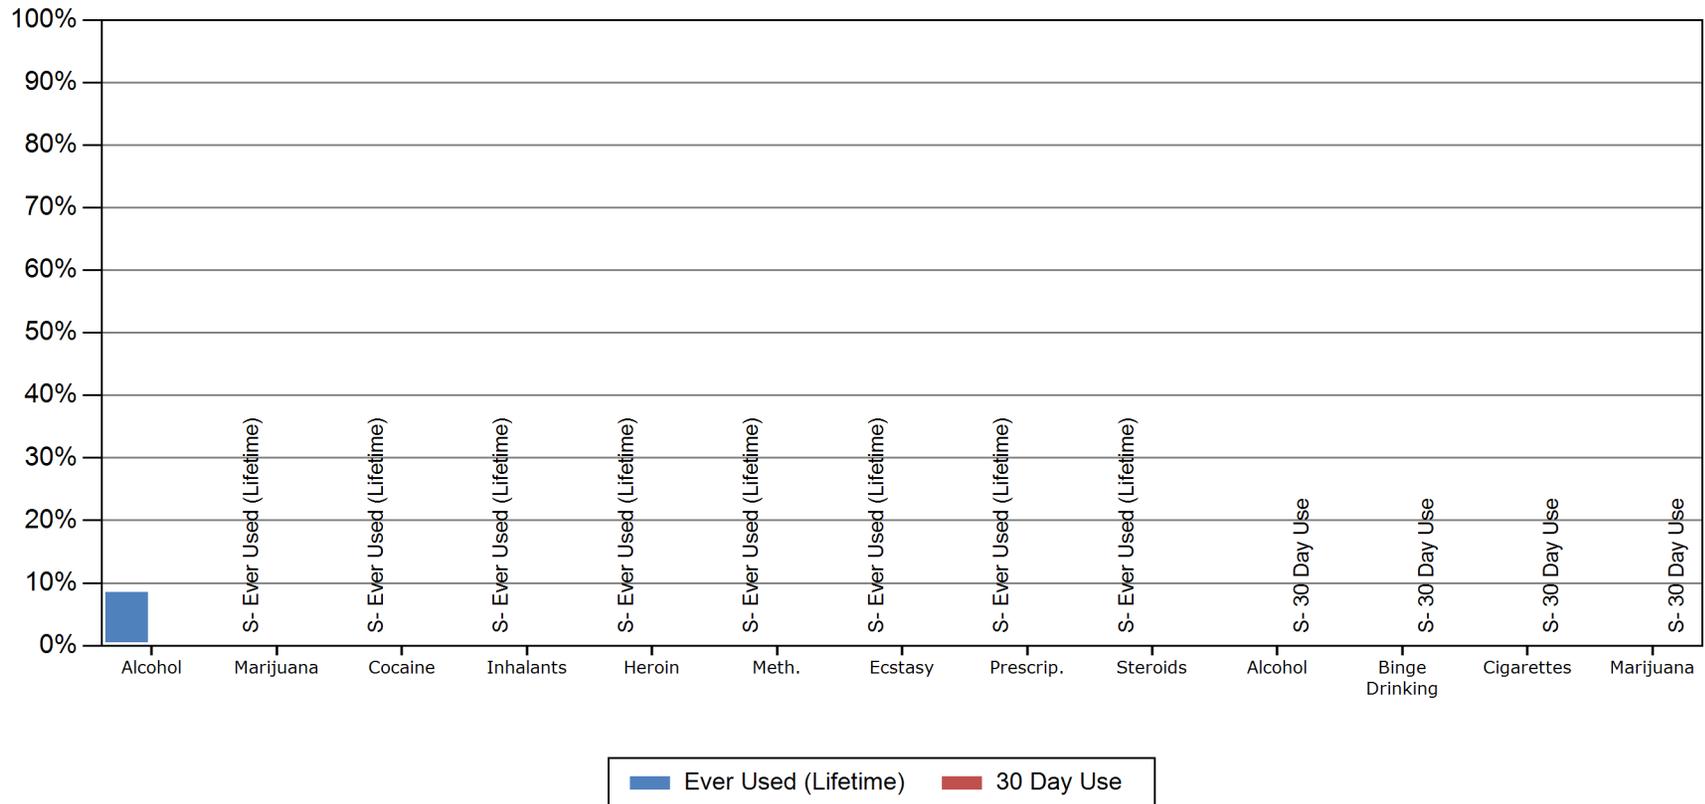

The questions regarding lifetime use of cocaine, heroin, and steroids are only asked on high school versions of the survey. Percentages for these three substances are based only on the 9th-12th grade students who responded to these questions. Grades 6-8 will display as suppressed for these substances.

Substance Use

Grade: 6

ATOD Use

The "Ever Used (Lifetime)" section of the chart shows the percentage of students who reported using the substance at least once in their lives. The "30-day Use" section shows the percentage of students who reported using the substance at least once in the past 30 days.

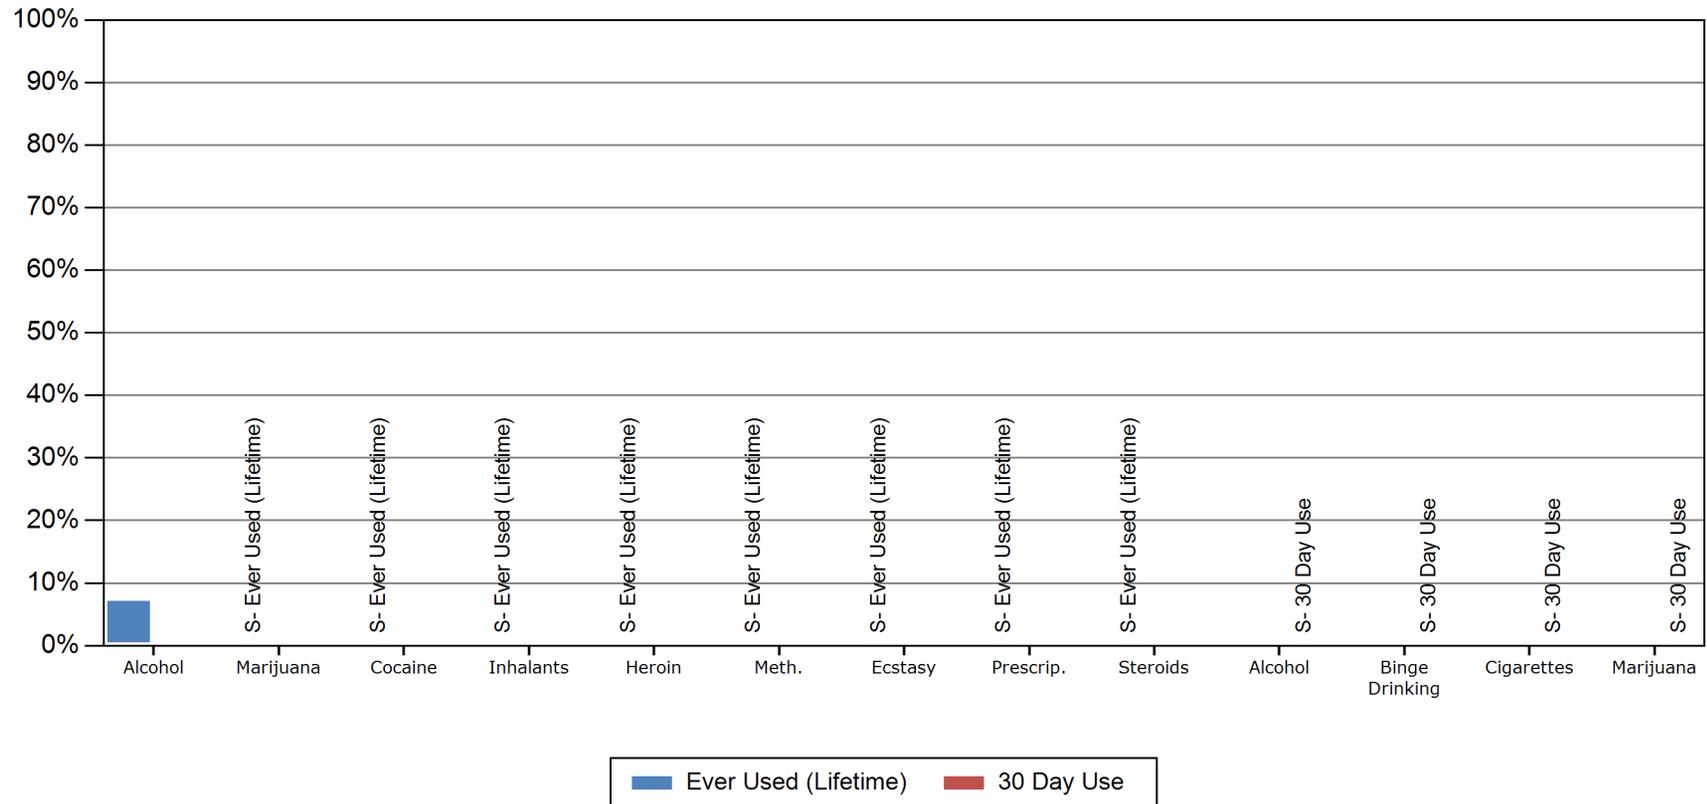

The questions regarding lifetime use of cocaine, heroin, and steroids are only asked on high school versions of the survey. Percentages for these three substances are based only on the 9th-12th grade students who responded to these questions. Grades 6-8 will display as suppressed for these substances.

Substance Use

Grade: 7

ATOD Use

The "Ever Used (Lifetime)" section of the chart shows the percentage of students who reported using the substance at least once in their lives. The "30-day Use" section shows the percentage of students who reported using the substance at least once in the past 30 days.

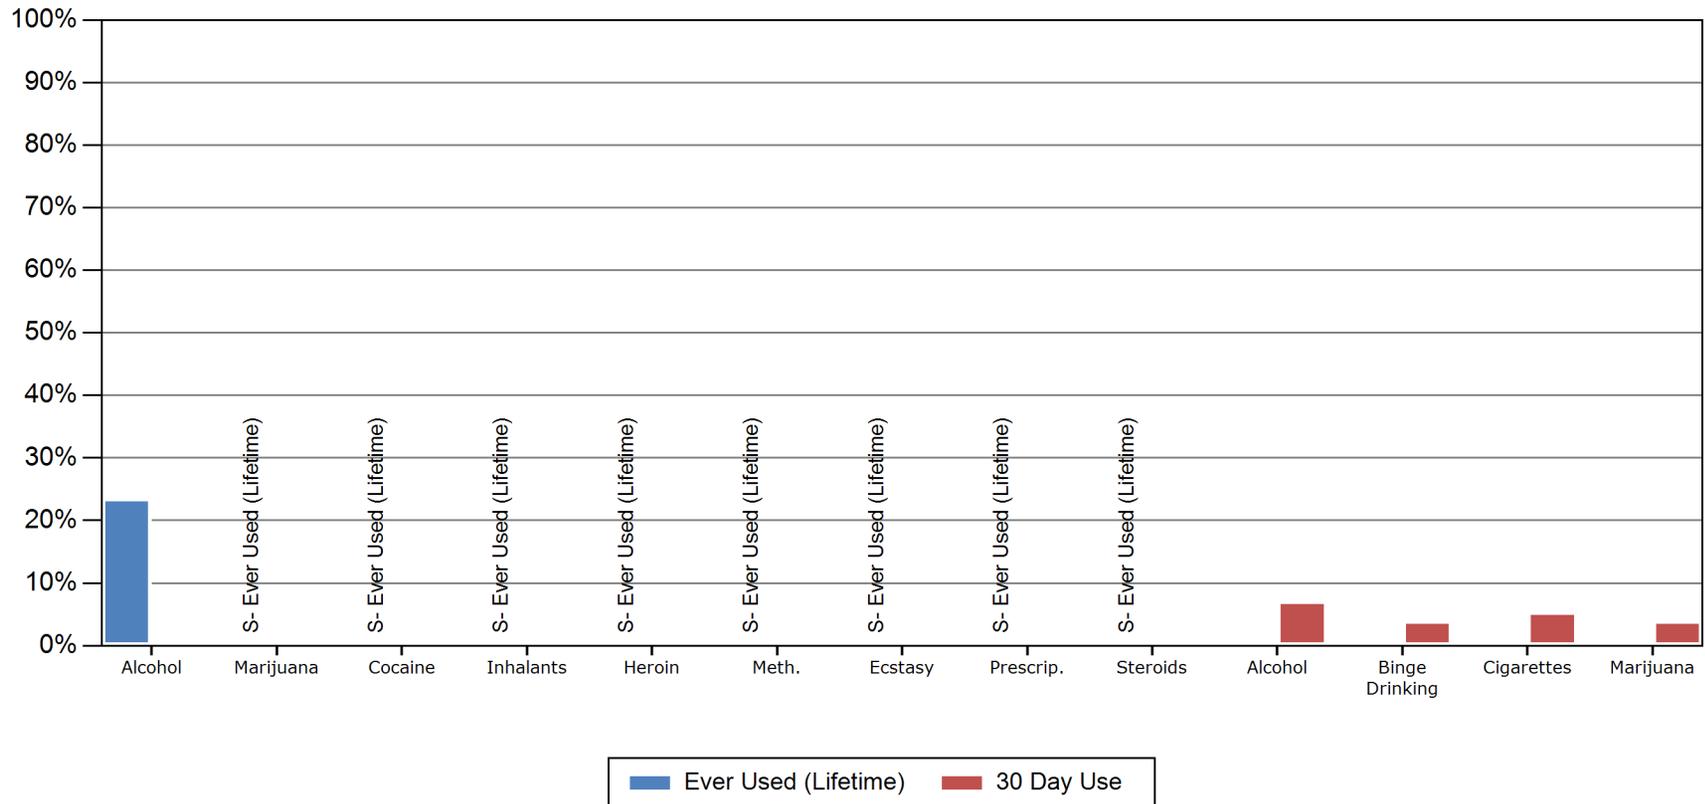

The questions regarding lifetime use of cocaine, heroin, and steroids are only asked on high school versions of the survey. Percentages for these three substances are based only on the 9th-12th grade students who responded to these questions. Grades 6-8 will display as suppressed for these substances.

Substance Use

Grade: 8

ATOD Use

The "Ever Used (Lifetime)" section of the chart shows the percentage of students who reported using the substance at least once in their lives. The "30-day Use" section shows the percentage of students who reported using the substance at least once in the past 30 days.

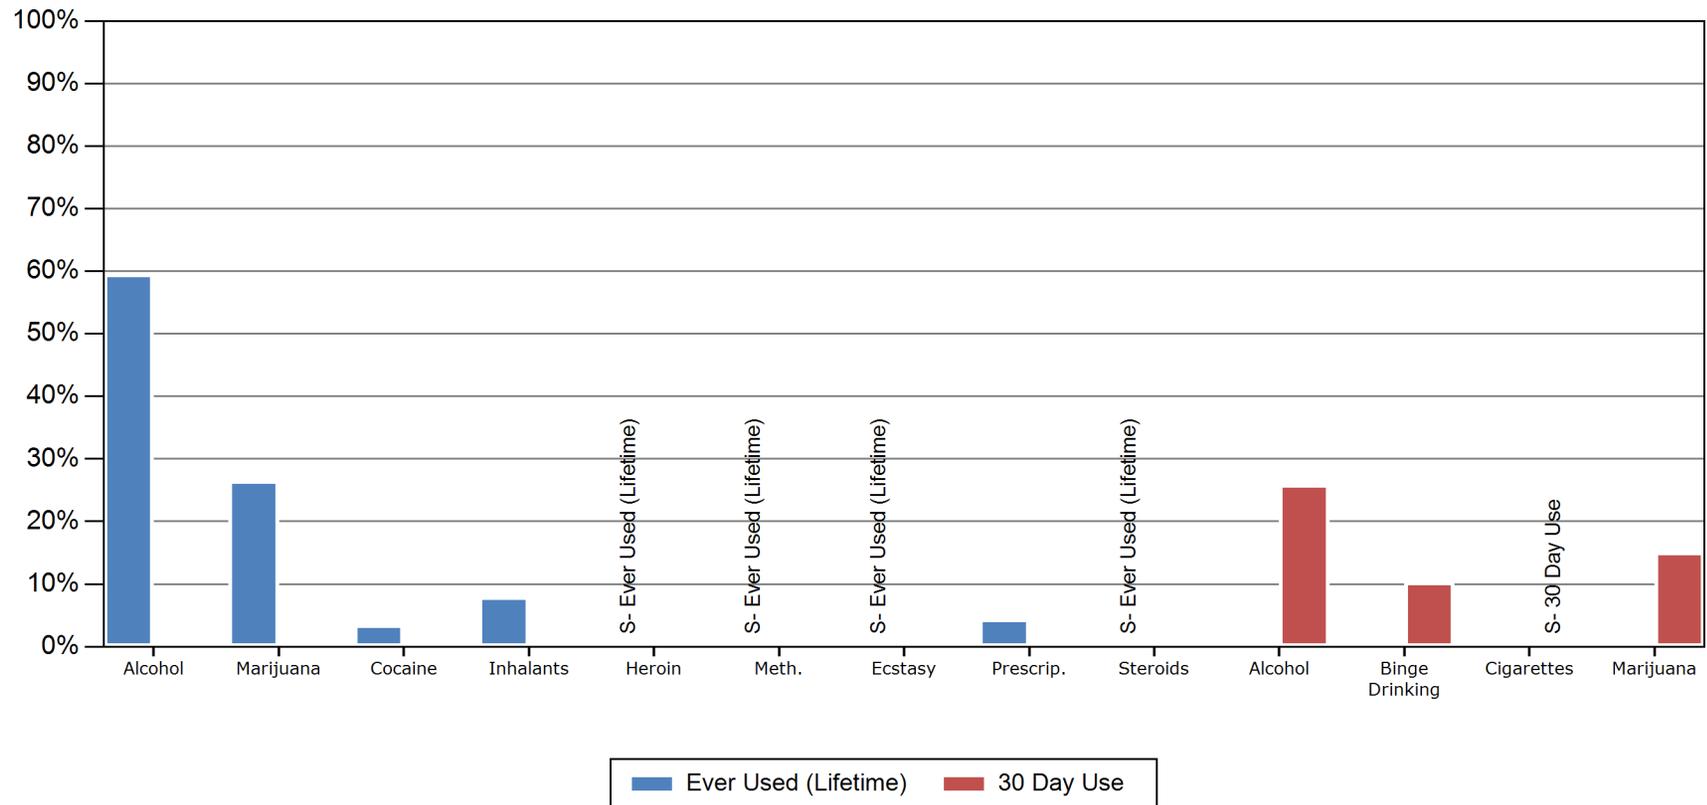

The questions regarding lifetime use of cocaine, heroin, and steroids are only asked on high school versions of the survey. Percentages for these three substances are based only on the 9th-12th grade students who responded to these questions. Grades 6-8 will display as suppressed for these substances.

Substance Use

Grade: 9

ATOD Use

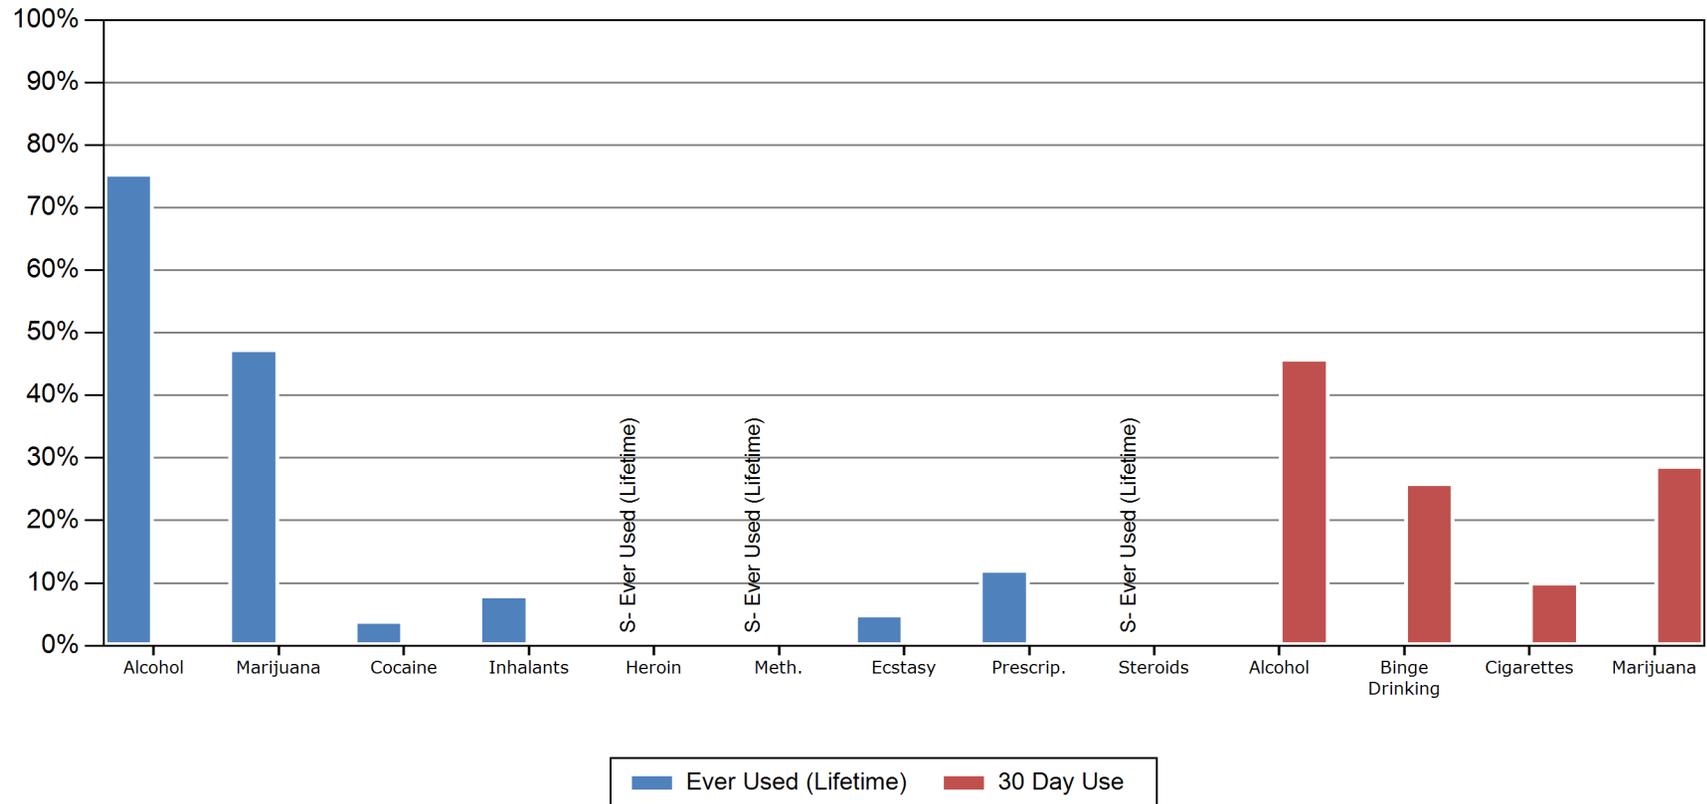

The "Ever Used (Lifetime)" section of the chart shows the percentage of students who reported using the substance at least once in their lives. The "30-day Use" section shows the percentage of students who reported using the substance at least once in the past 30 days.

Substance Use

Grade: 10

ATOD Use

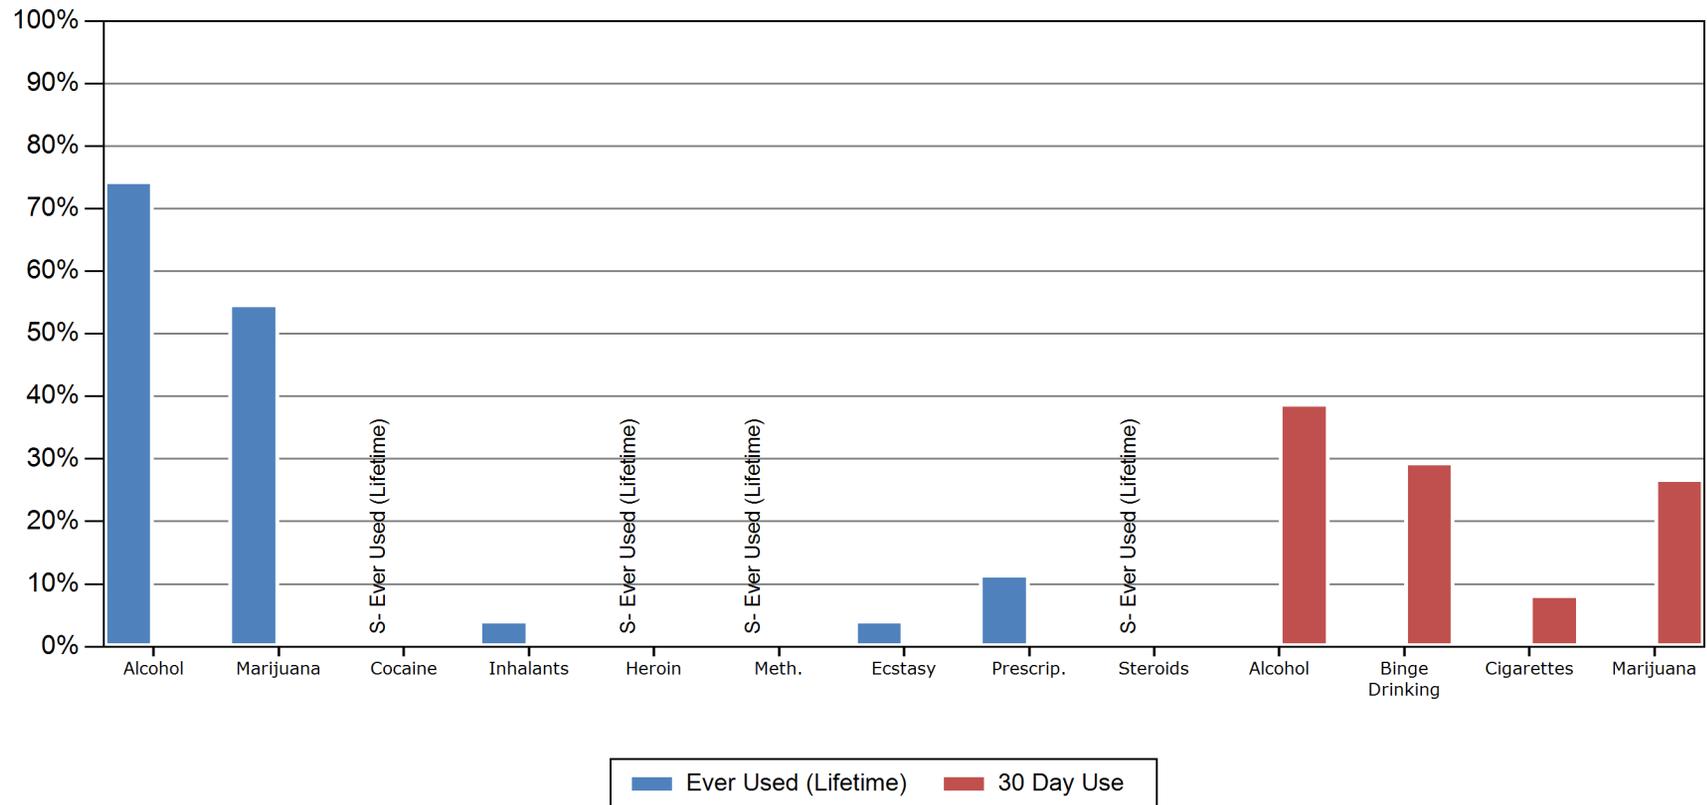

The "Ever Used (Lifetime)" section of the chart shows the percentage of students who reported using the substance at least once in their lives. The "30-day Use" section shows the percentage of students who reported using the substance at least once in the past 30 days.

Substance Use

Grade: 11

ATOD Use

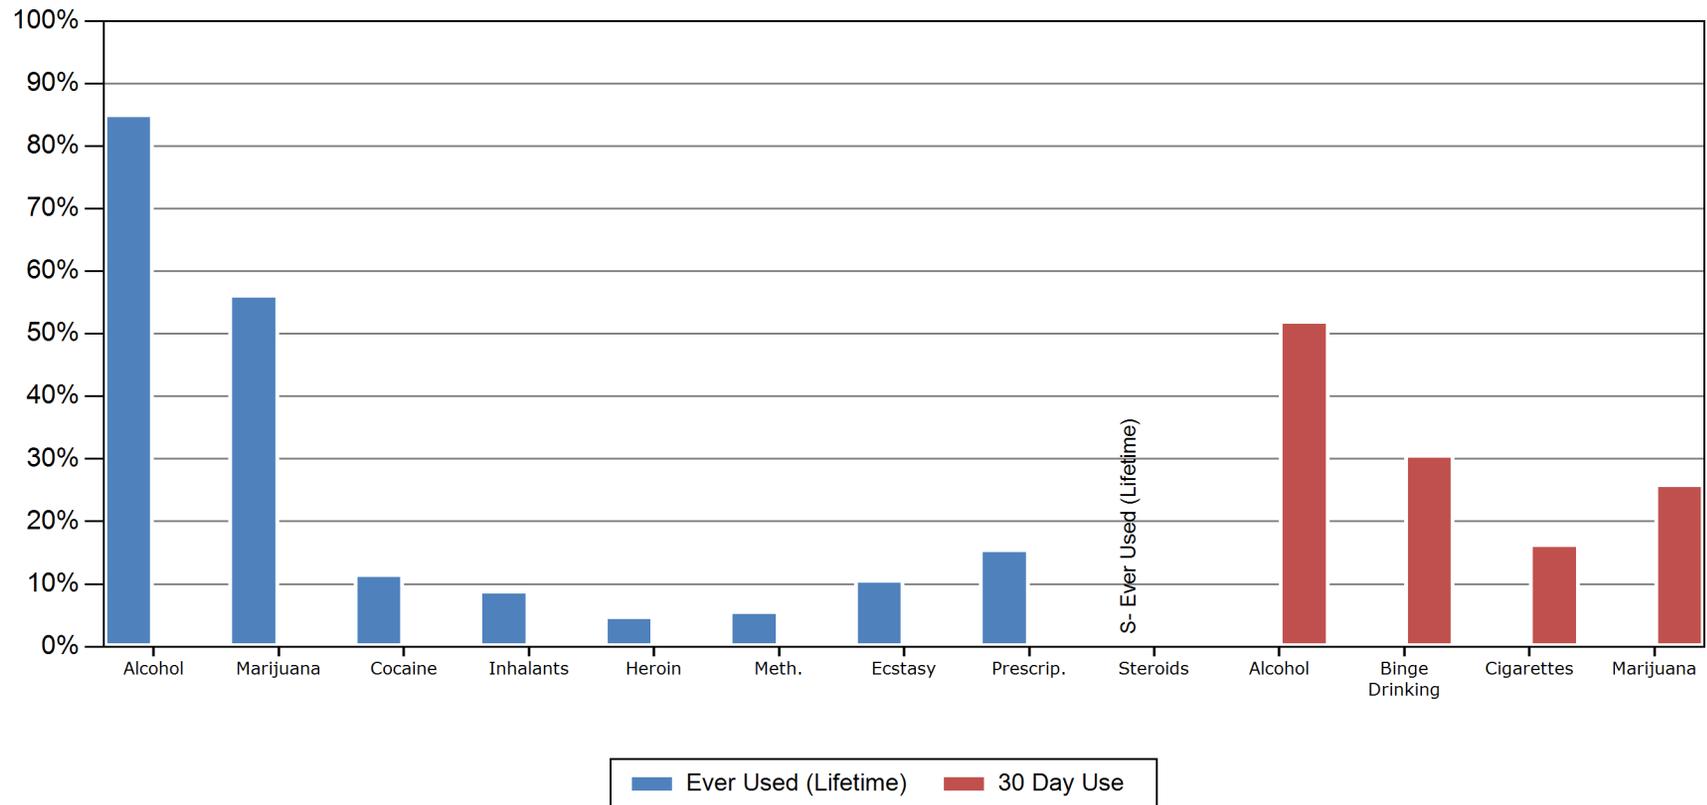

The "Ever Used (Lifetime)" section of the chart shows the percentage of students who reported using the substance at least once in their lives. The "30-day Use" section shows the percentage of students who reported using the substance at least once in the past 30 days.

Substance Use

Grade: 12

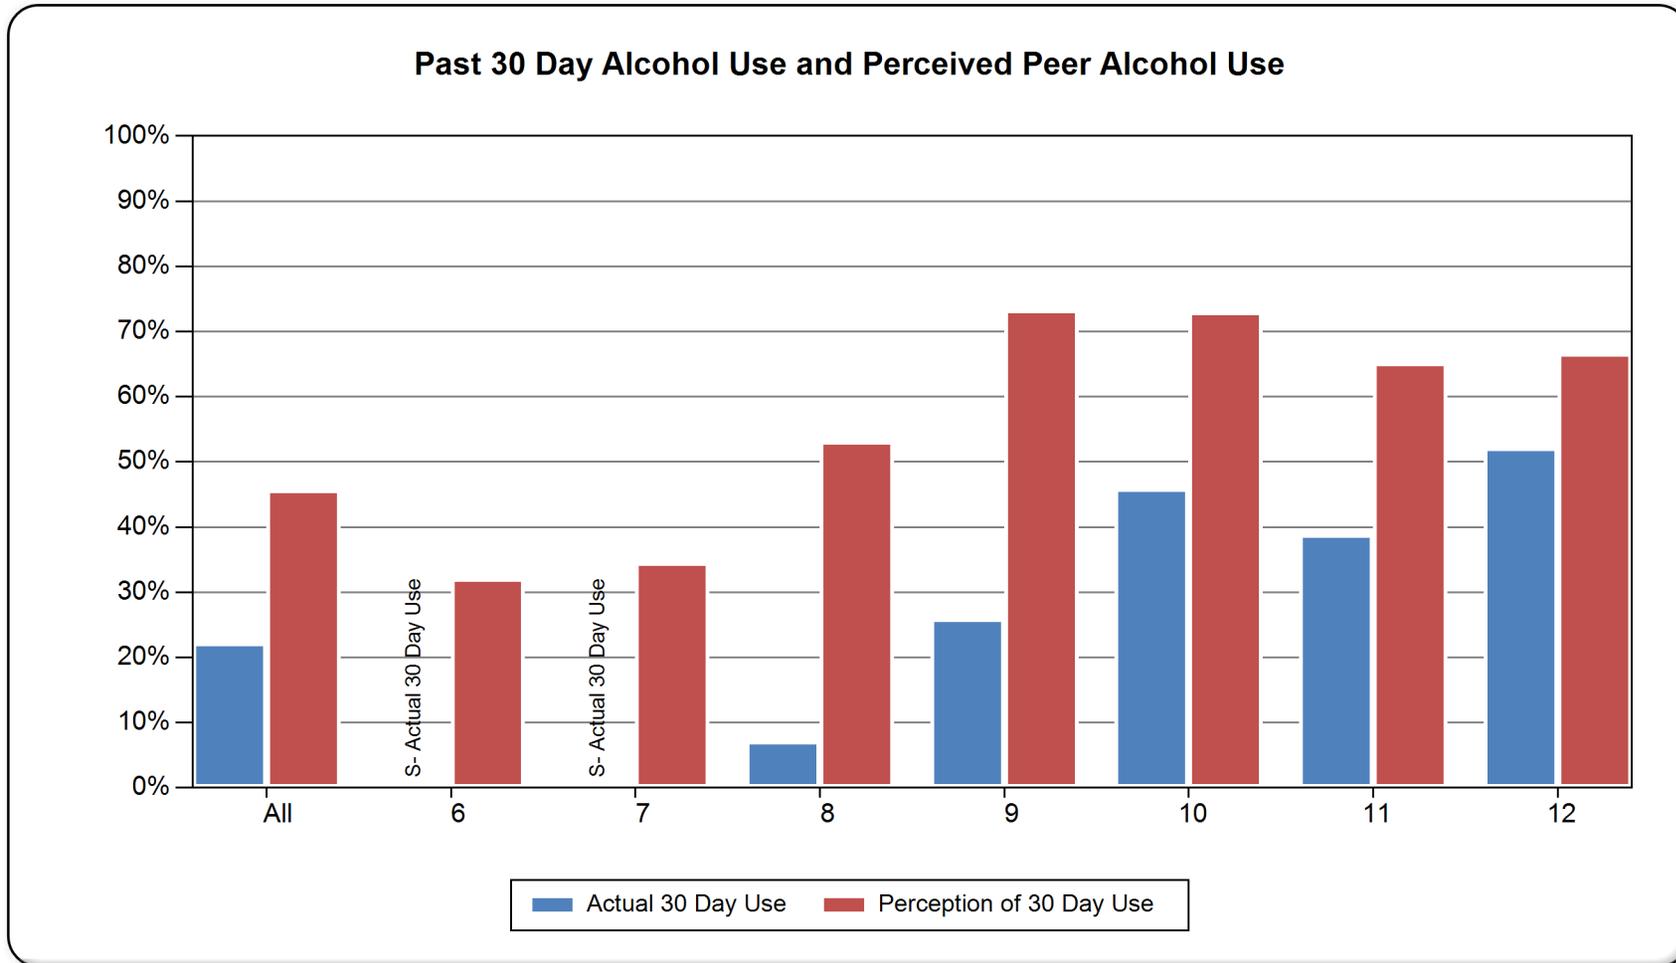

ATOD Use

The "Ever Used (Lifetime)" section of the chart shows the percentage of students who reported using the substance at least once in their lives. The "30-day Use" section shows the percentage of students who reported using the substance at least once in the past 30 days.

Substance Use

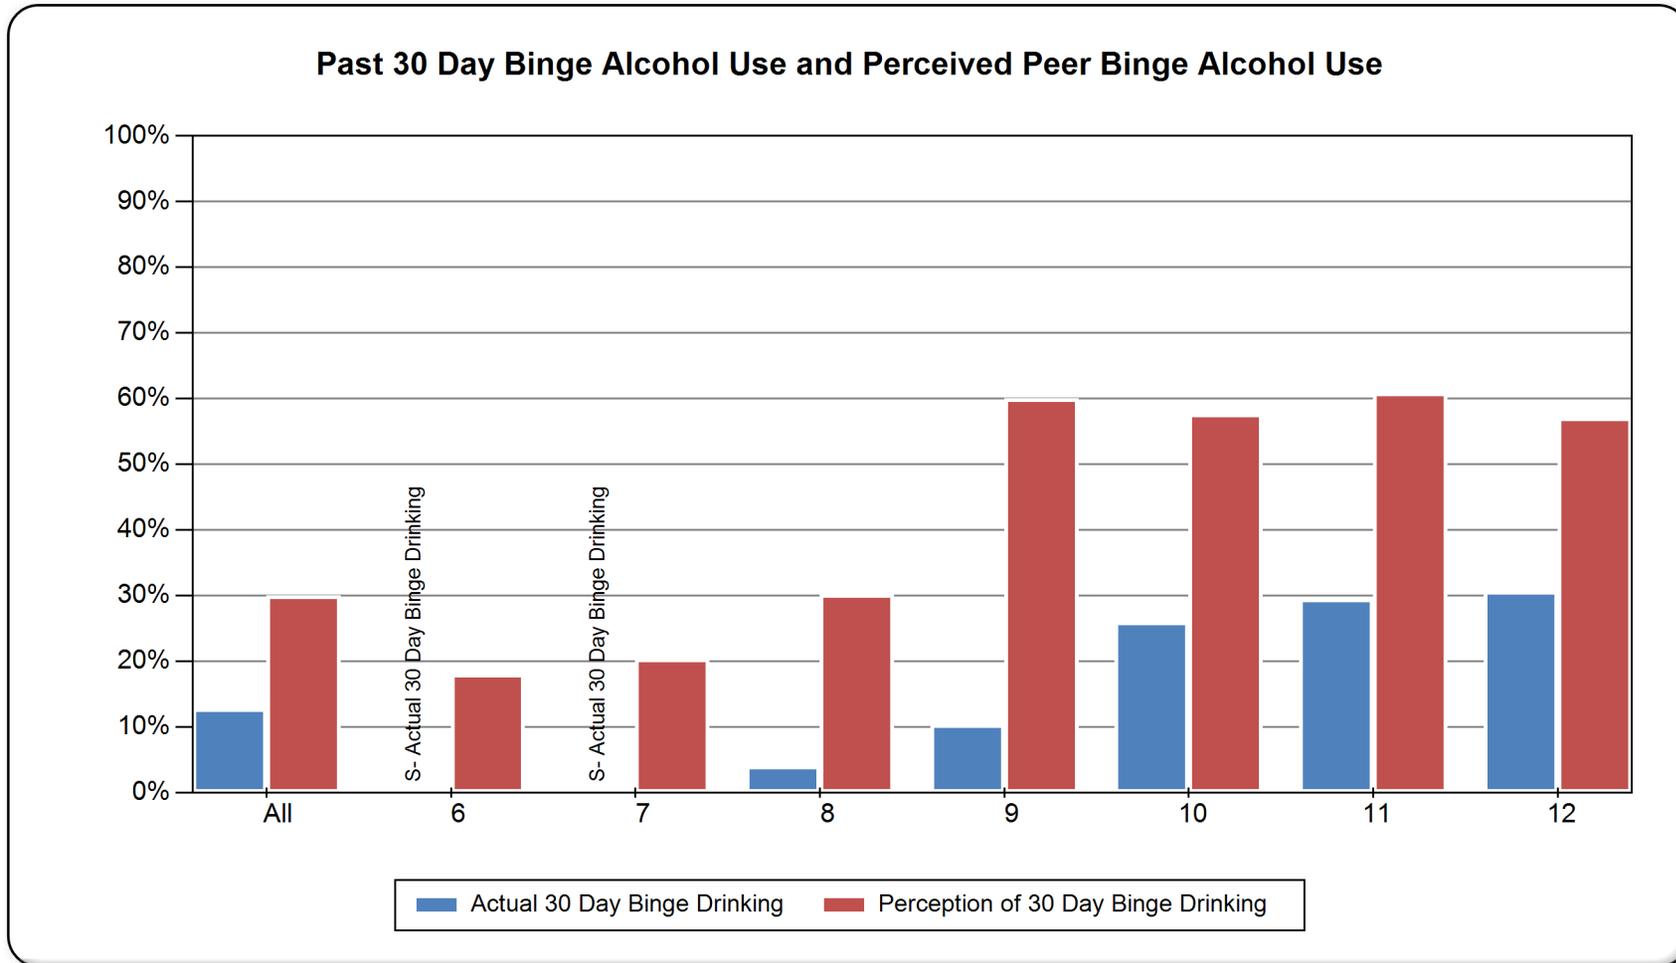

*Perceived peer alcohol use represents responses for the question "During the past 30 days, on how many days do you think a typical student at your school drank alcohol?"

This question is asked only on the Module A version of the high school survey and middle school versions of the survey. Response rates are calculated based only on the number of 6th-12th grade students who participated on this survey.

Substance Use

*Perceived peer alcohol use represents responses for the question "During the past 30 days, on how many days do you think a typical student at your school had 5 or more drinks of alcohol?"

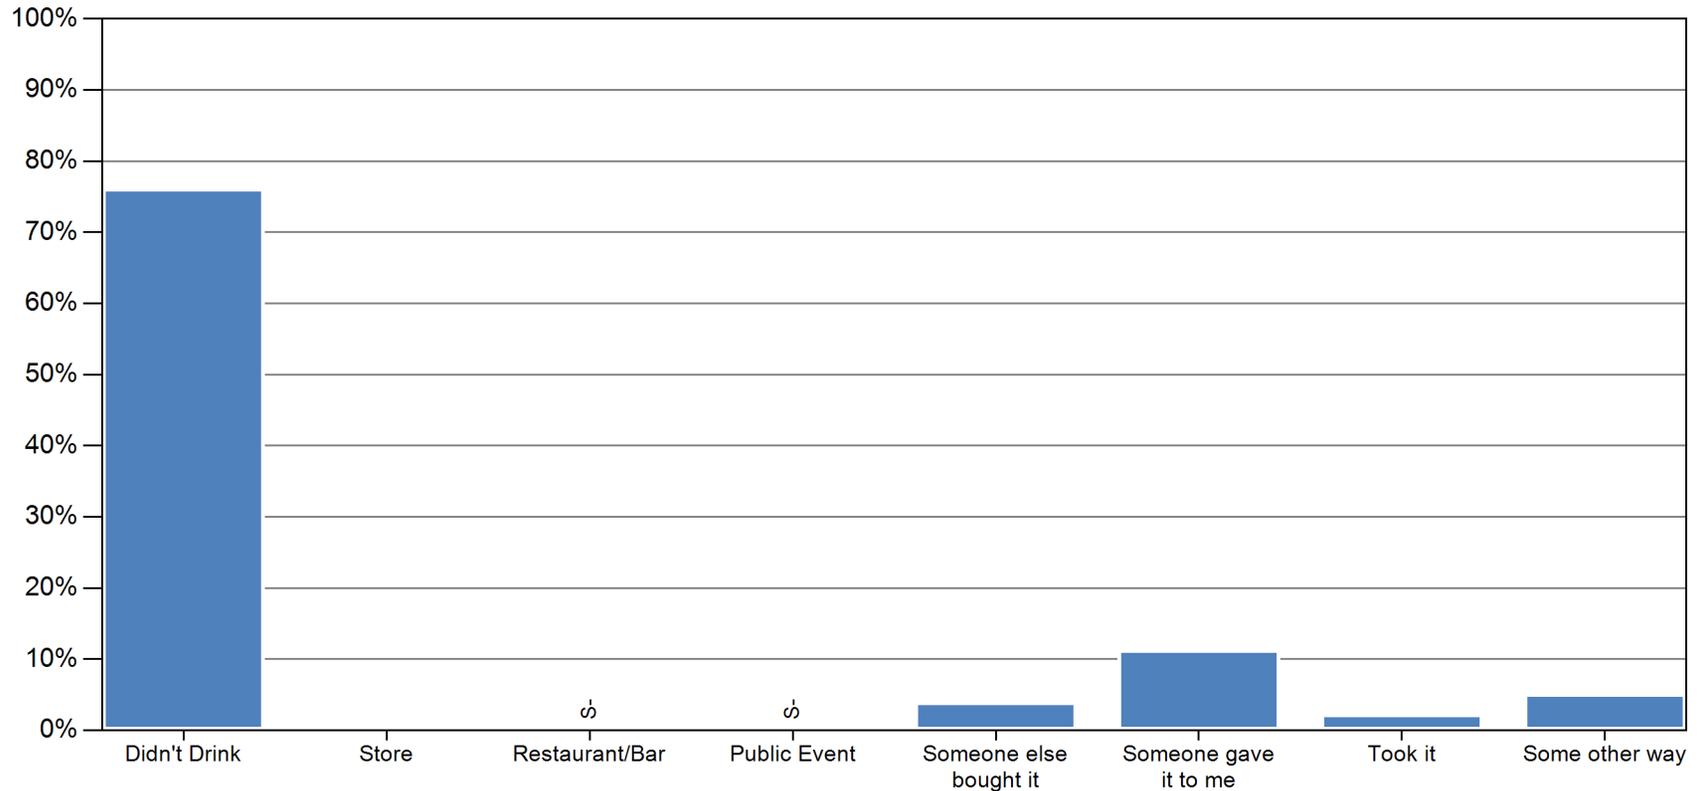

This question is asked only on the Module A version of the high school survey and middle school versions of the survey. Response rates are calculated based only on the number of 6th-12th grade students who participated on this survey.

Substance Use

Grade: All

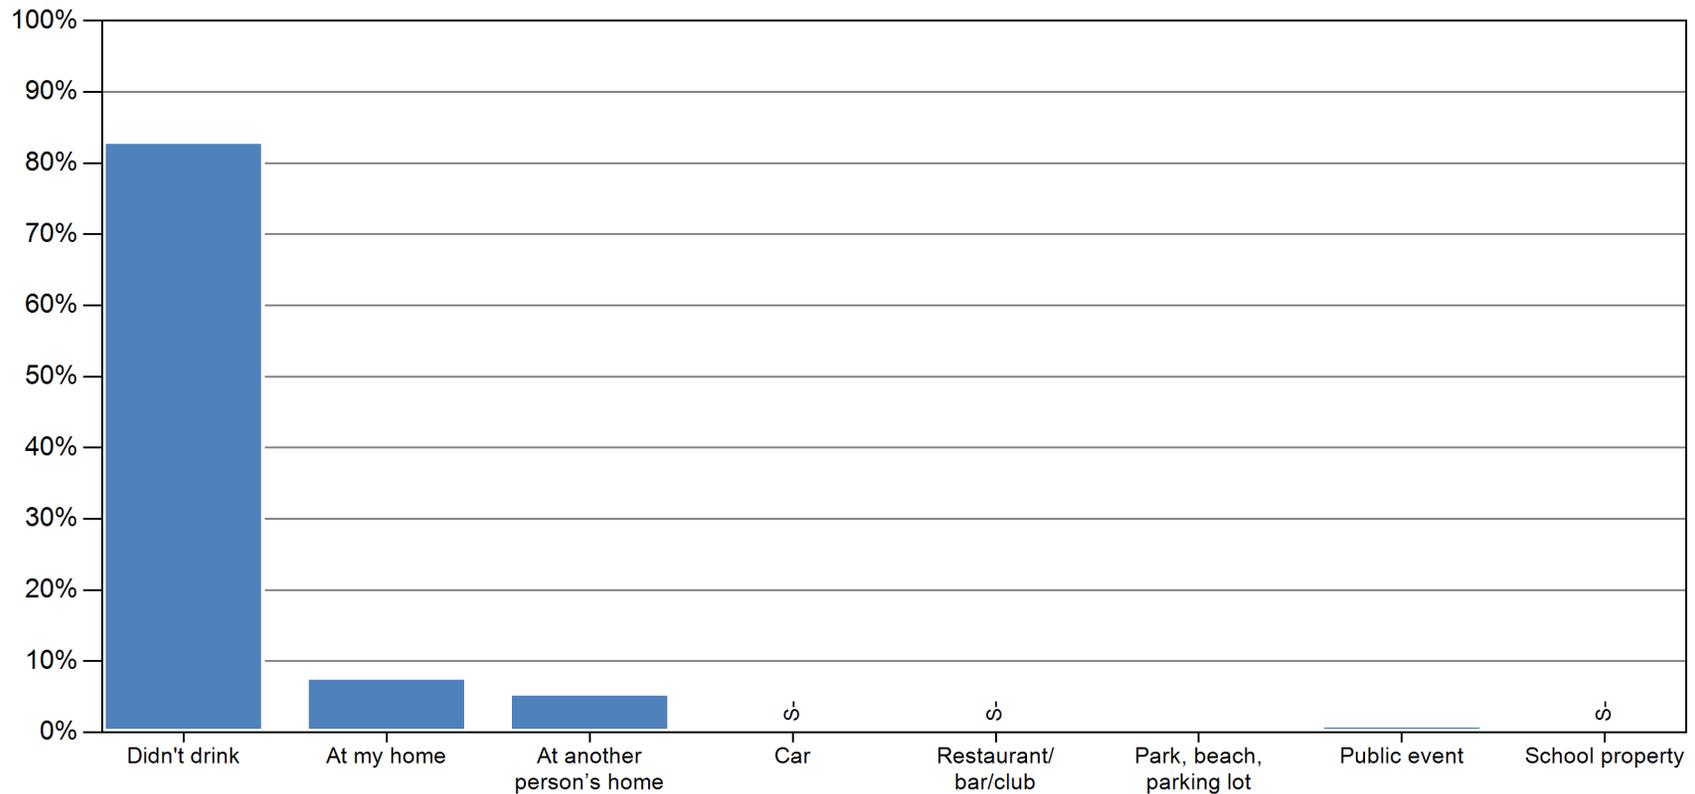

Places Youth Obtained Alcohol During the Past 30 Days

Substance Use

Grade: All

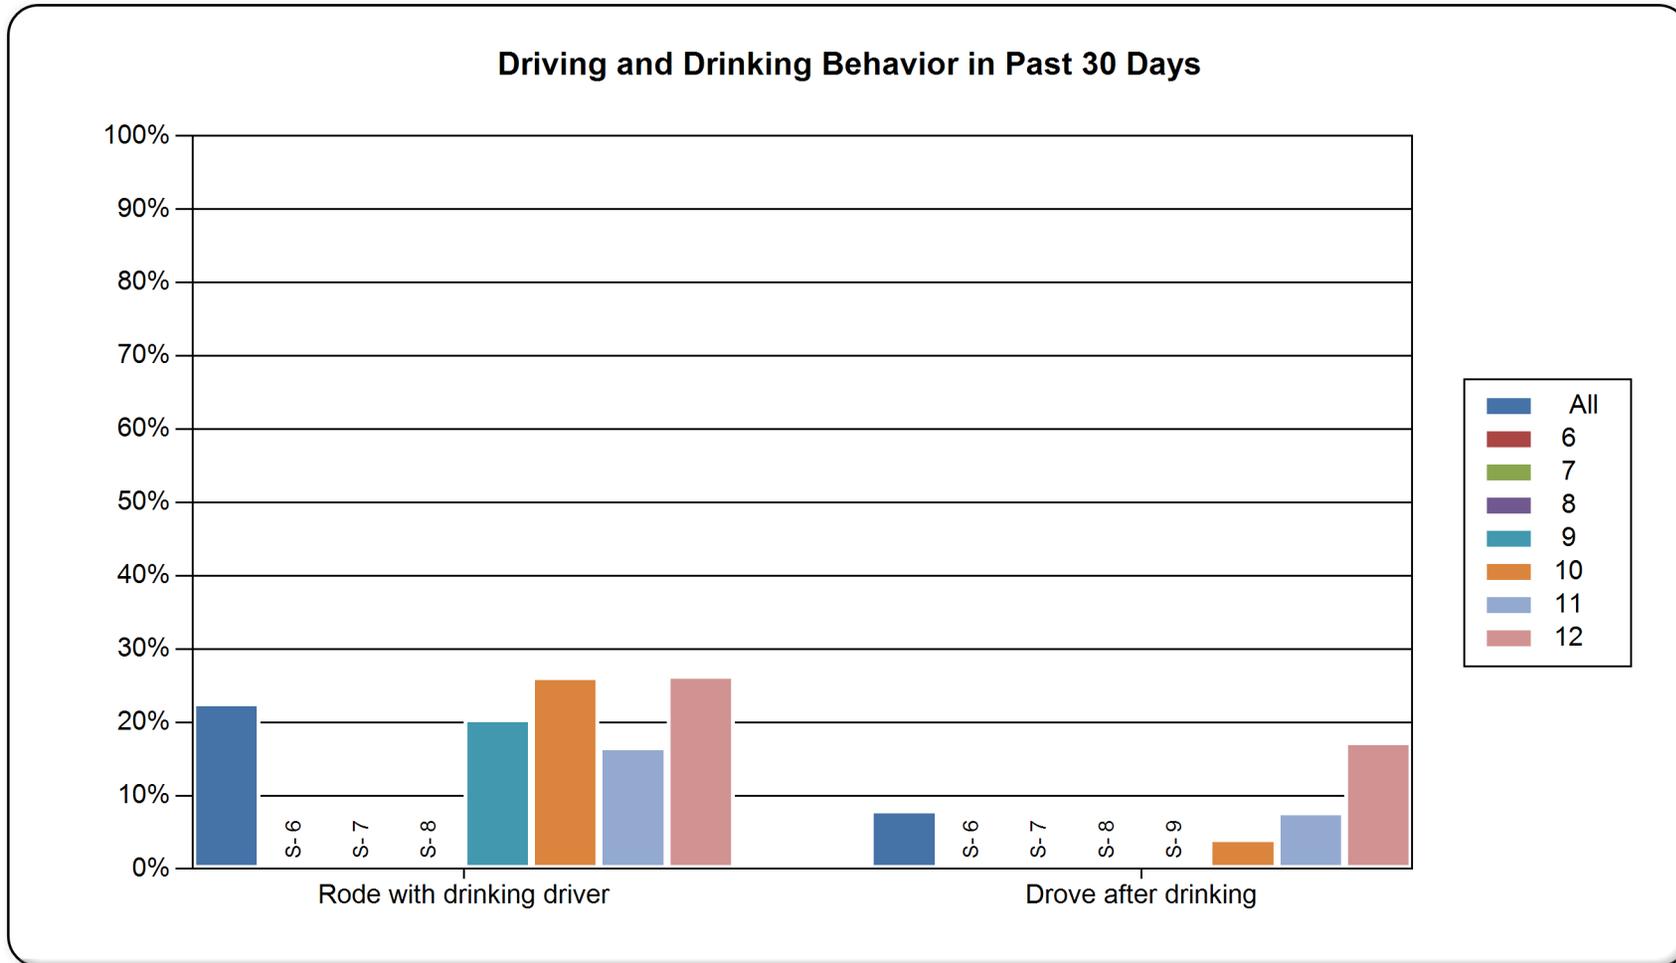

Places Youth Drank Alcohol During the Past 12 Months

This question is asked only on the Module A version of the high school survey and middle school versions of the survey. Response rates are calculated based only on the number of 6th-12th grade students who participated on this survey.

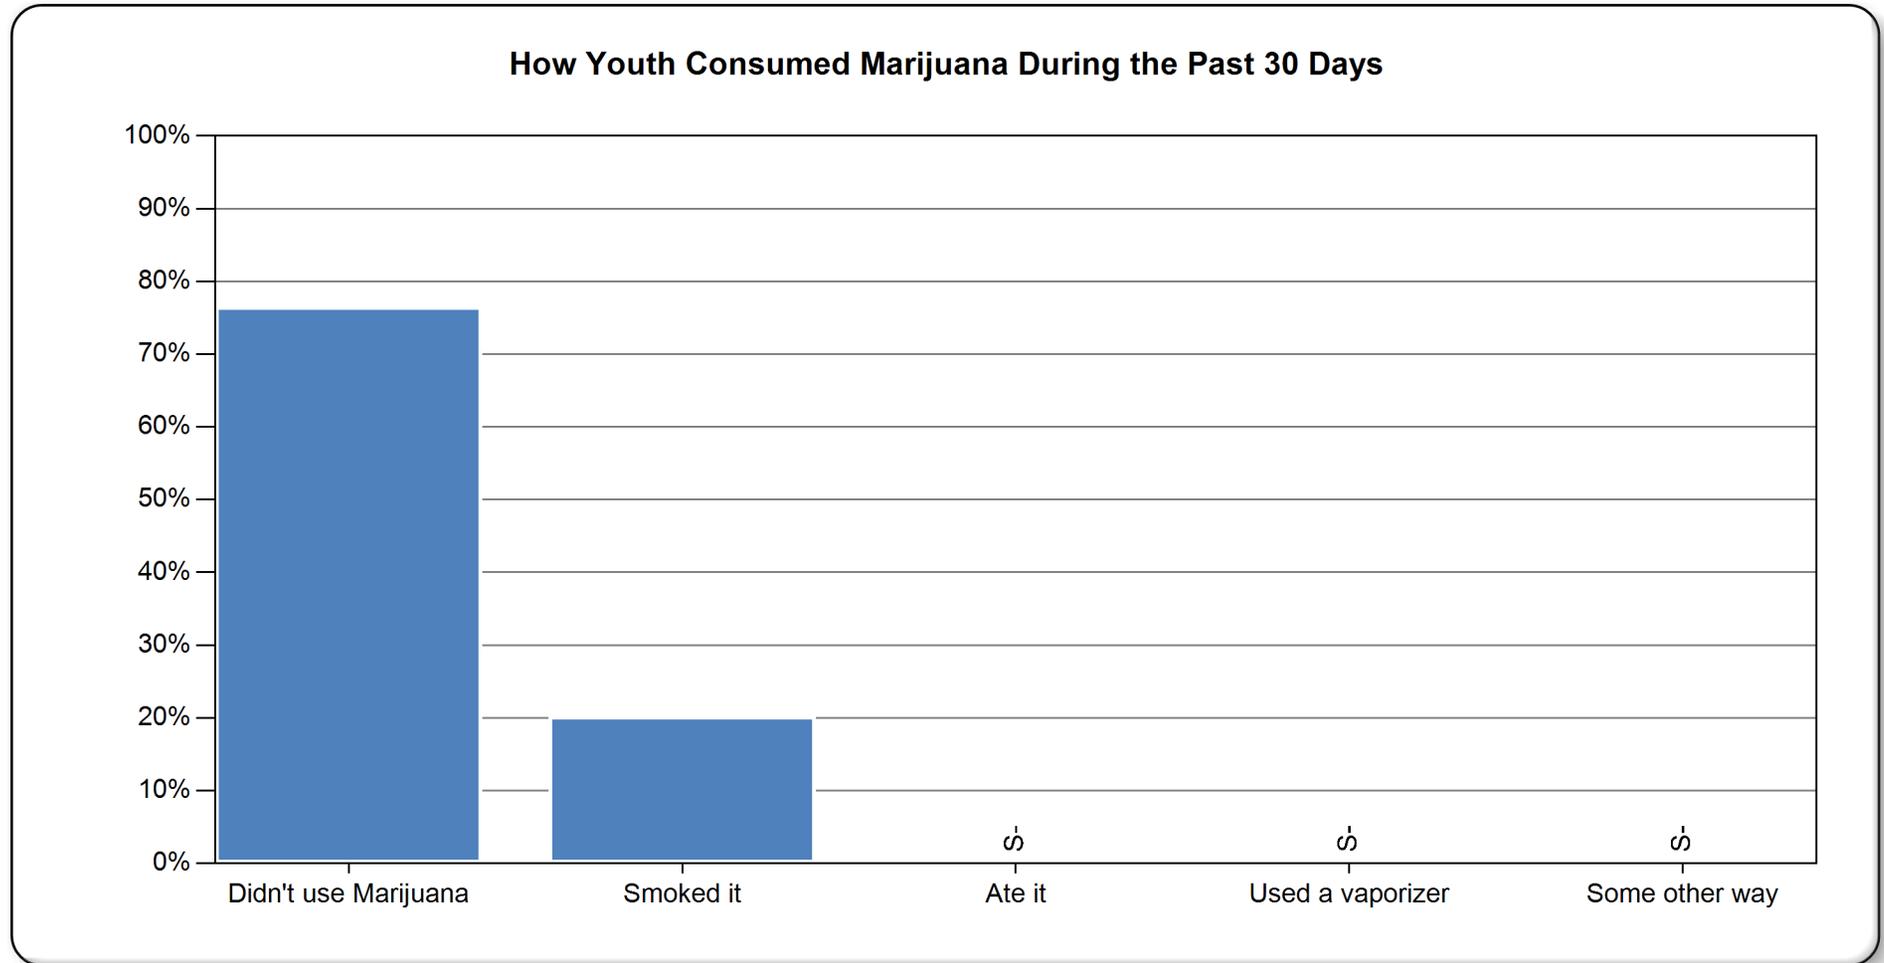

Substance Use

Substance Use

Grade: All

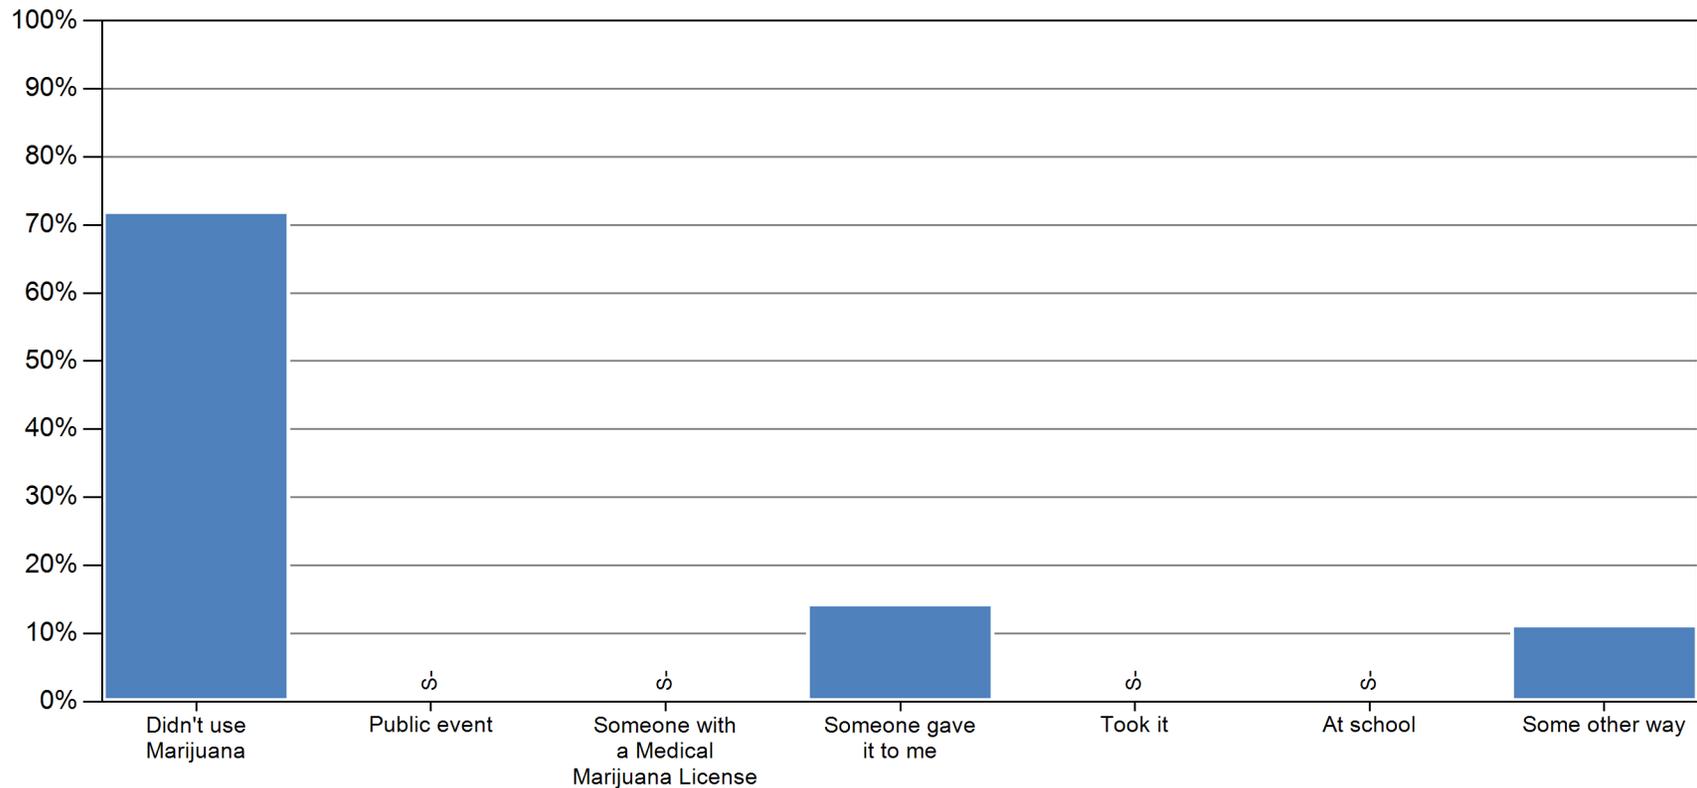

This question is asked only on the Module A version of the high school survey. Response rates are calculated based only on the number of 9th-12th grade students who participated on this survey.

Substance Use

Grade: All

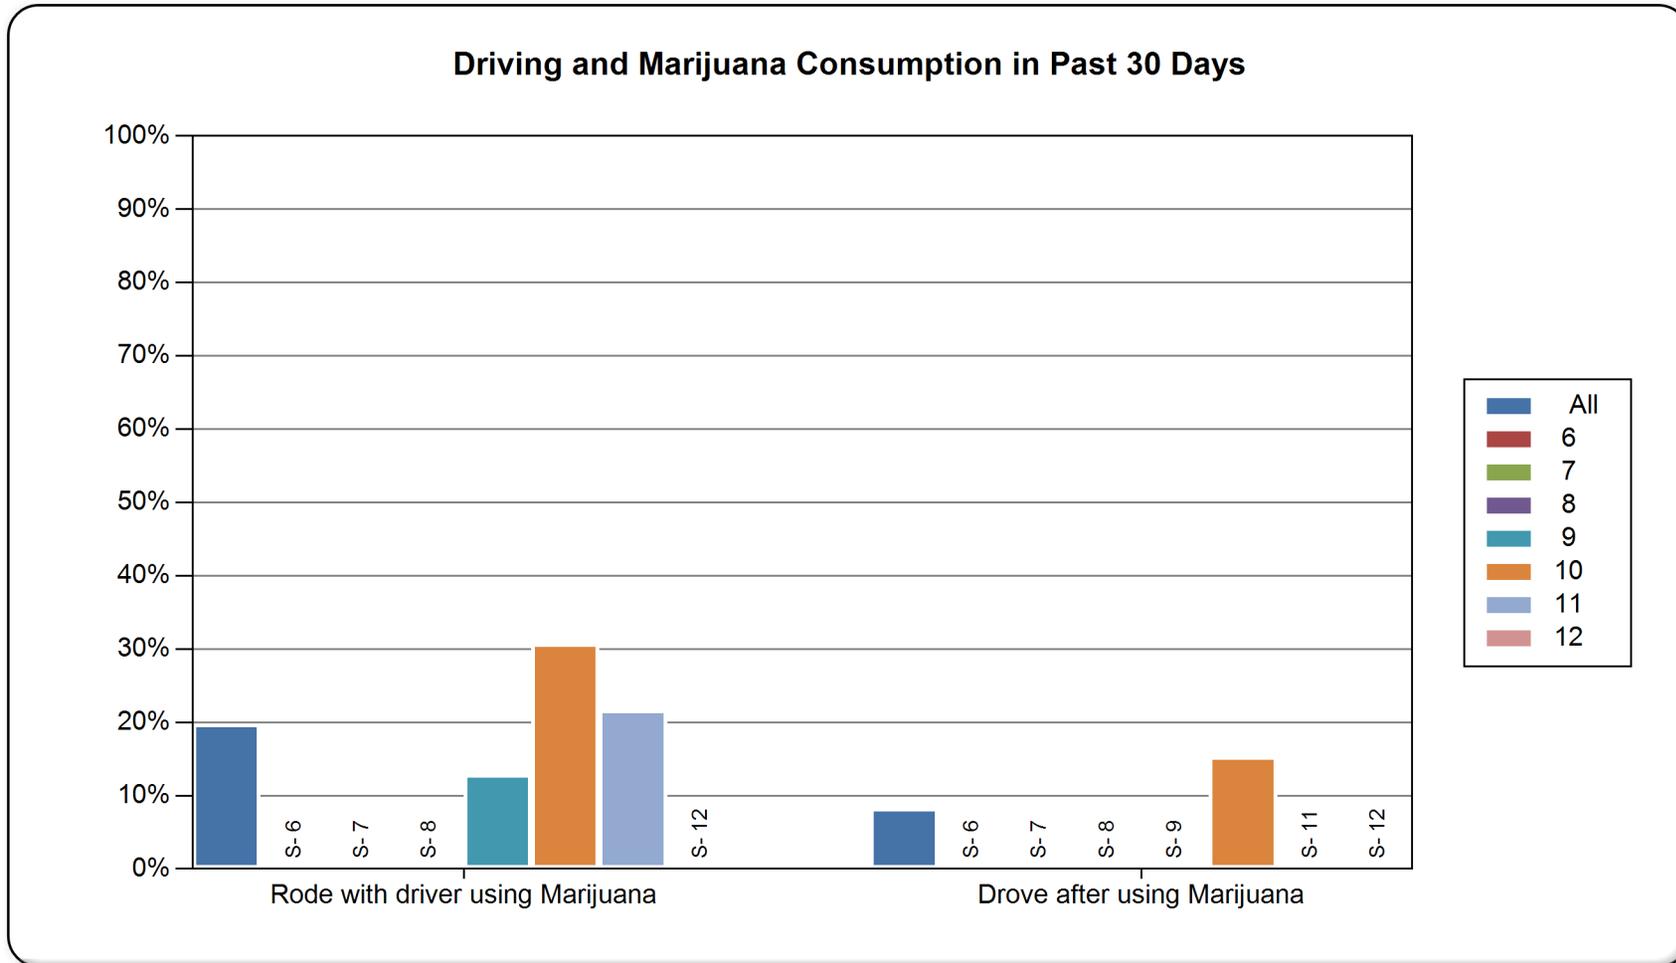

Places Youth Obtained Marijuana During the Past 30 Days

This question is asked only on the Module A version of the high school survey. Response rates are calculated based only on the number of 9th-12th grade students who participated on this survey.

Substance Use

This question is asked only on the Module A version of the high school survey. Response rates are calculated based only on the number of 9th-12th grade students who participated on this survey.

Substance Use - Alcohol

Have you ever had a drink of alcohol, other than a few sips? N: 396
Response Rate: 97.1%

Response	Sex	Grade							
		Total	6th	7th	8th	9th	10th	11th	12th
Yes	Total	13%	9%	8%	24%	-	-	-	-
	Female	12%	11%	-	23%	-	-	-	-
	Male	14%	7%	11%	24%	-	-	-	-
No	Total	87%	91%	92%	76%	-	-	-	-
	Female	88%	89%	+	77%	-	-	-	-
	Male	86%	93%	89%	76%	-	-	-	-

This question is asked only on the state middle school version of the survey. Response rates are calculated based only on the number of 6th-8th grade students who participated on this survey.

Substance Use - Alcohol

During your life, on how many days have you had at least one drink of alcohol? N: 412
Response Rate: 95.8%

Response	Sex	Grade							
		Total	6th	7th	8th	9th	10th	11th	12th
0 days	Total	26%	-	-	-	40%	24%	26%	15%

	Female	16%	-	-	-	-	-	-	16%
	Male	9%	-	-	-	-	-	18%	-

This question is asked only on the high school versions of the survey. Response rates are calculated based only on the number of 9th-12th grade students who participated.

Risk and Protective Factors

Risk and Protective Factors

Risk and protective factors are scales that combine the responses from a set of variables to assess the likelihood of unhealthy and problem behaviors. The risk and protective factor scales on the HKCS are based on Hawkins and Catalano's Risk and Protective Factor framework, a well-known research model used nationally. **Risk factors** are characteristics of youth, their peers, and their environment (e.g. school, family, community) that if present, make it more likely that an individual will engage in problem behaviors. For example, youth who have peers who use substances are more likely to engage in substance use themselves. **Protective factors** are positive characteristics that buffer against the negative influences of risk. Protective factors such as strong bonding to family, positive peer interaction, and school engagement have been shown to reduce the likelihood that youth will participate in risky behaviors. These risk and protective factors are assessed in four different domains: community; school; family; and peer/individual.

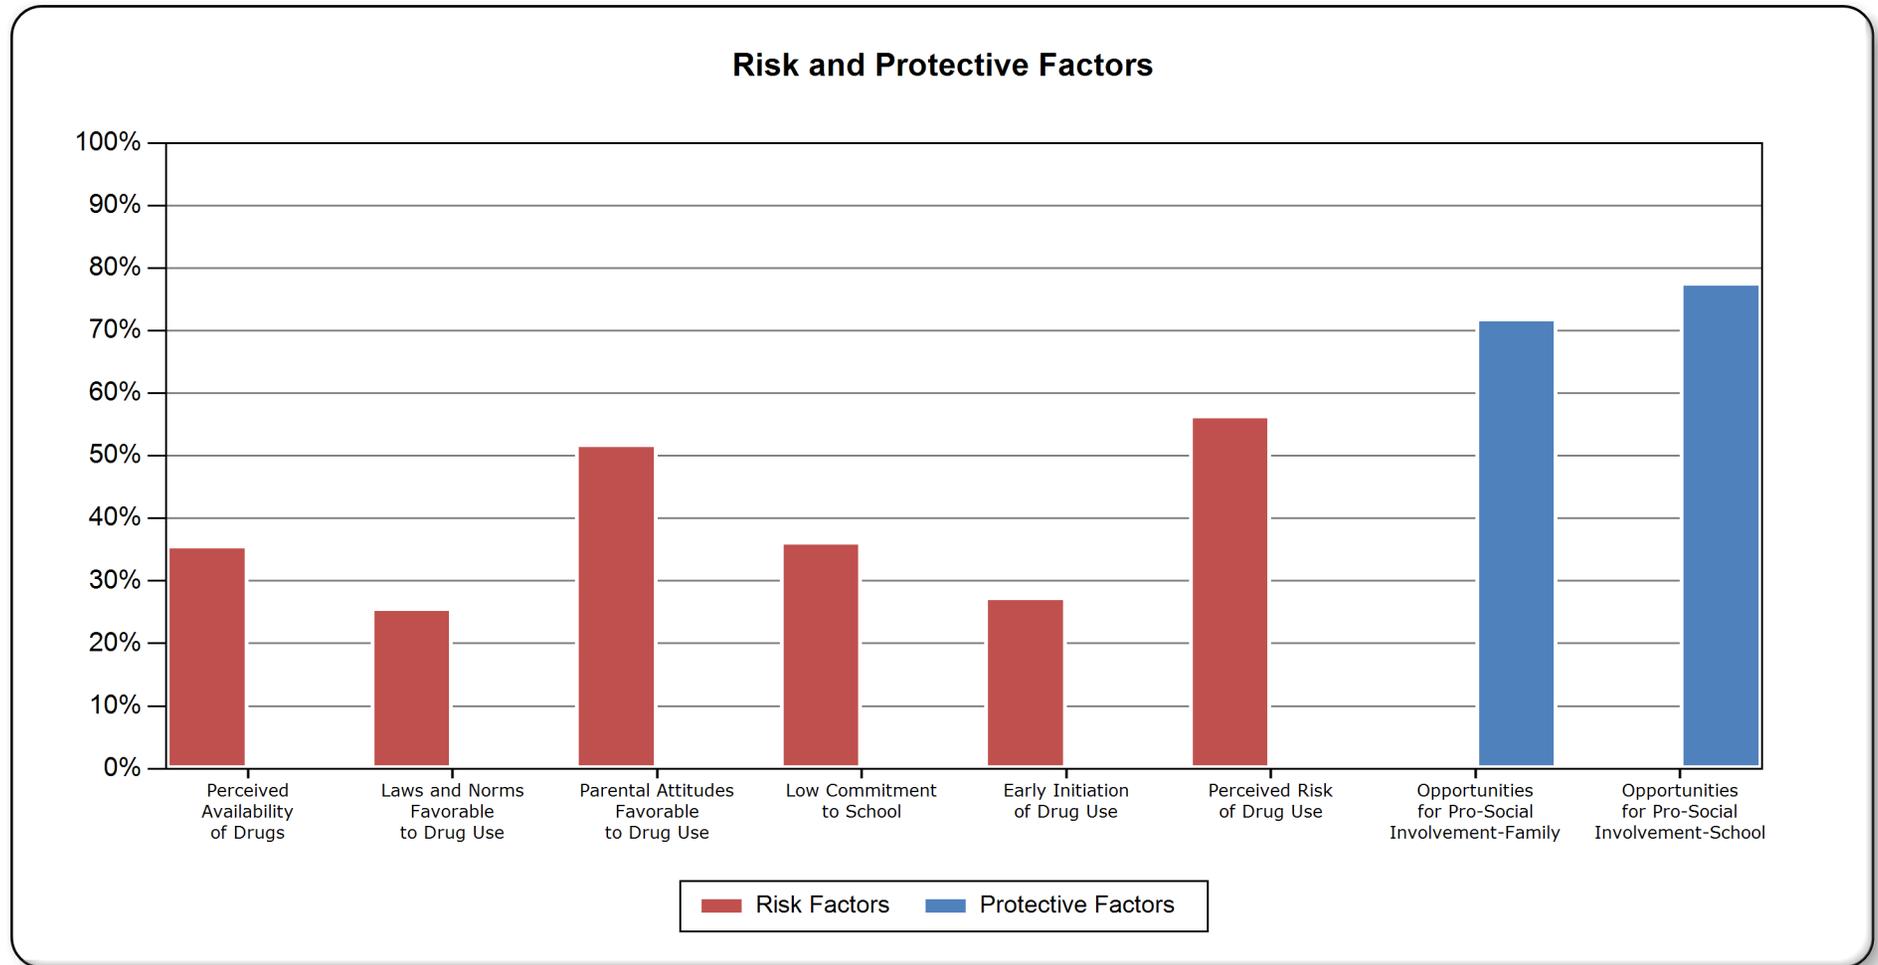

The HKCS includes six risk factor and two protective factor scales. Each factor scale is derived from a combination of scientifically-validated questions that measure the same underlying construct. For example, the risk factor scale labeled "Perceived Risk of Drug Use" includes 4 questions that ask how harmful it is to try different substances. These questions are then used to create a more robust profile of responses related to perceived risk of drug use. In order to create these scale scores, each student's mean score for each of the risk and protective factor scales is determined. From there, the distribution of all students' mean scores on each factor are examined and compared to a national cut-point (number used as a critical threshold for that factor). Students who are above the cut-point for a risk factor are more likely to engage in risky behavior. Students who are above the cut-point for protective factors are less likely to engage in risky behavior. The graphs and tables in this report show the percentage of students who are above or below the cut-point for each factor. Ultimately, it is desirable to have a small percentage of students above the cut-point for risk factors and a large percentage above the cut-point for protective factors. This would indicate that your community of students experiences less risk and more protection against risk compared to nationally-established standards.

The important thing to understand is that the more risk factors youth are exposed to, the more problem behaviors they are likely to exhibit. Conversely, the more protective factors that are present, the less likely problem behaviors will arise. Schools and communities can use this information to better understand where the youth population as a whole exhibits increased risk, and can work to target these behaviors through programs and policies. Likewise, results can also show what protective factors are present in these youth, and programs or policies to enhance these characteristics can be identified. School and community programs that reduce risk factors and enhance protective factors have been shown to positively impact the future health behavior outcomes of youth.

For more information, see Appendix C in this report.

Risk and Protective Factors

Grade: All

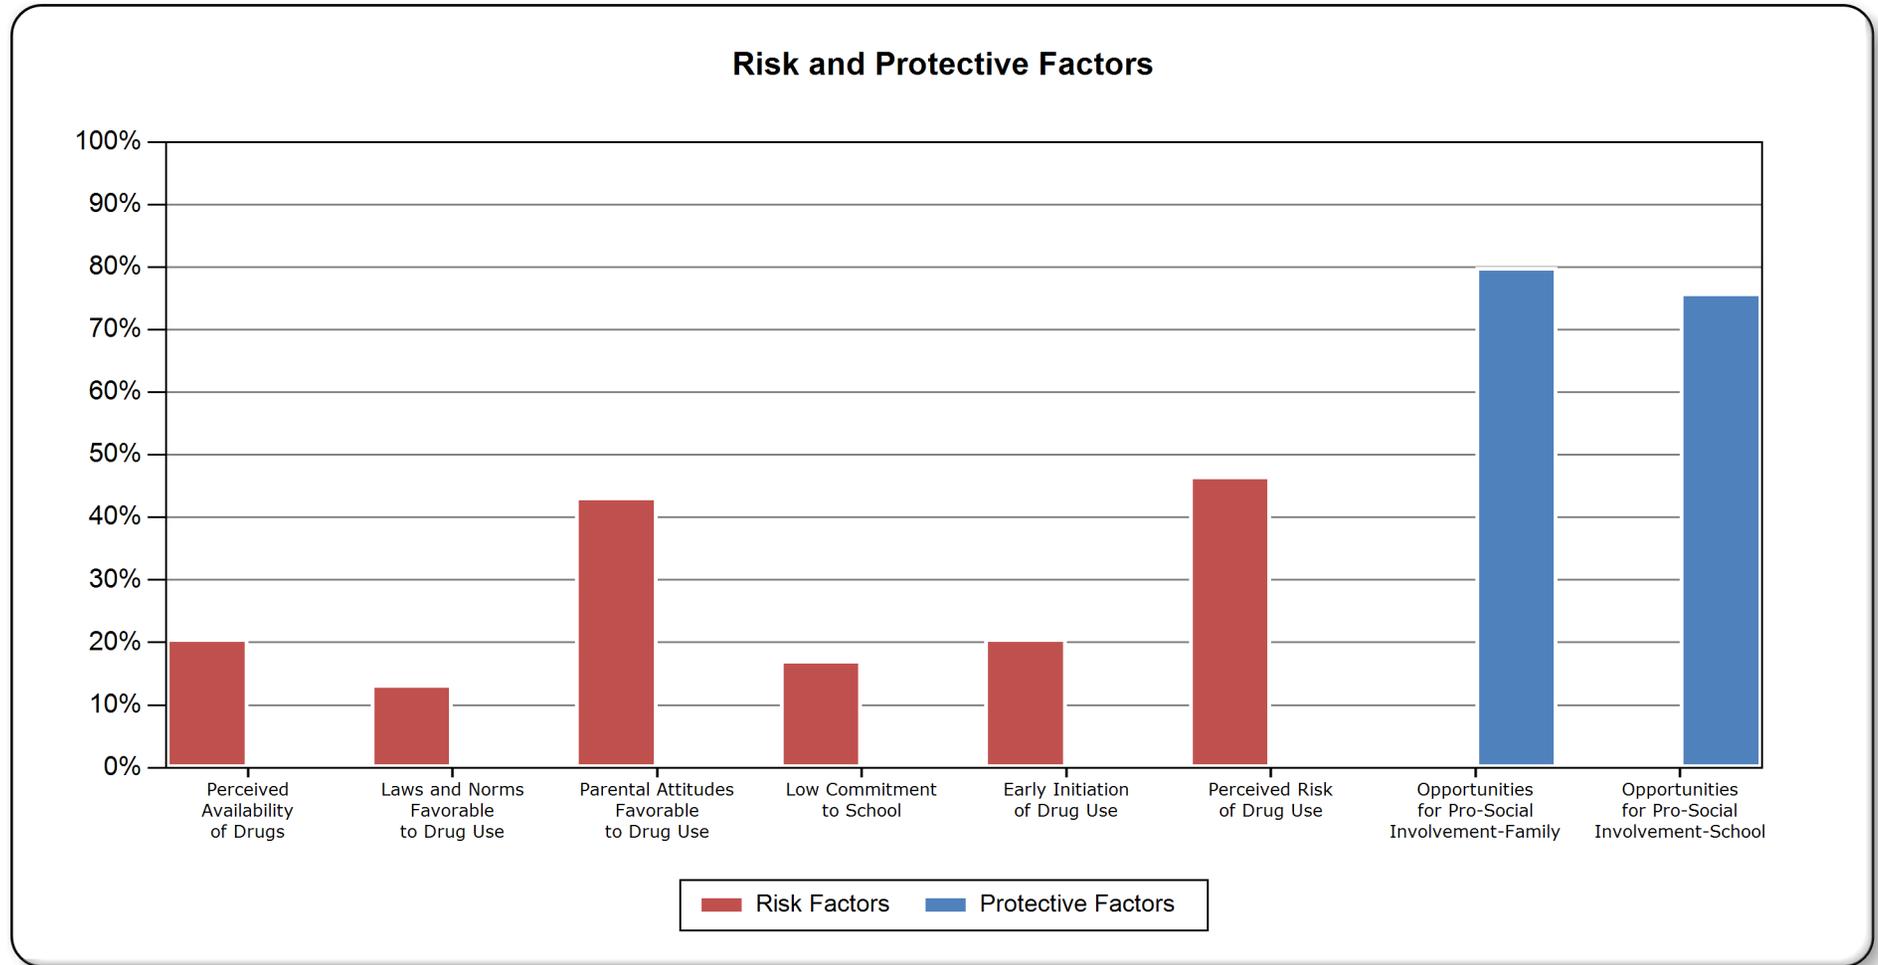

These questions are asked only on the Module A version of the high school survey. Response rates are calculated based only on the number of 9th-12th grade students who participated on this survey.

Risk and Protective Factors

Grade: 9

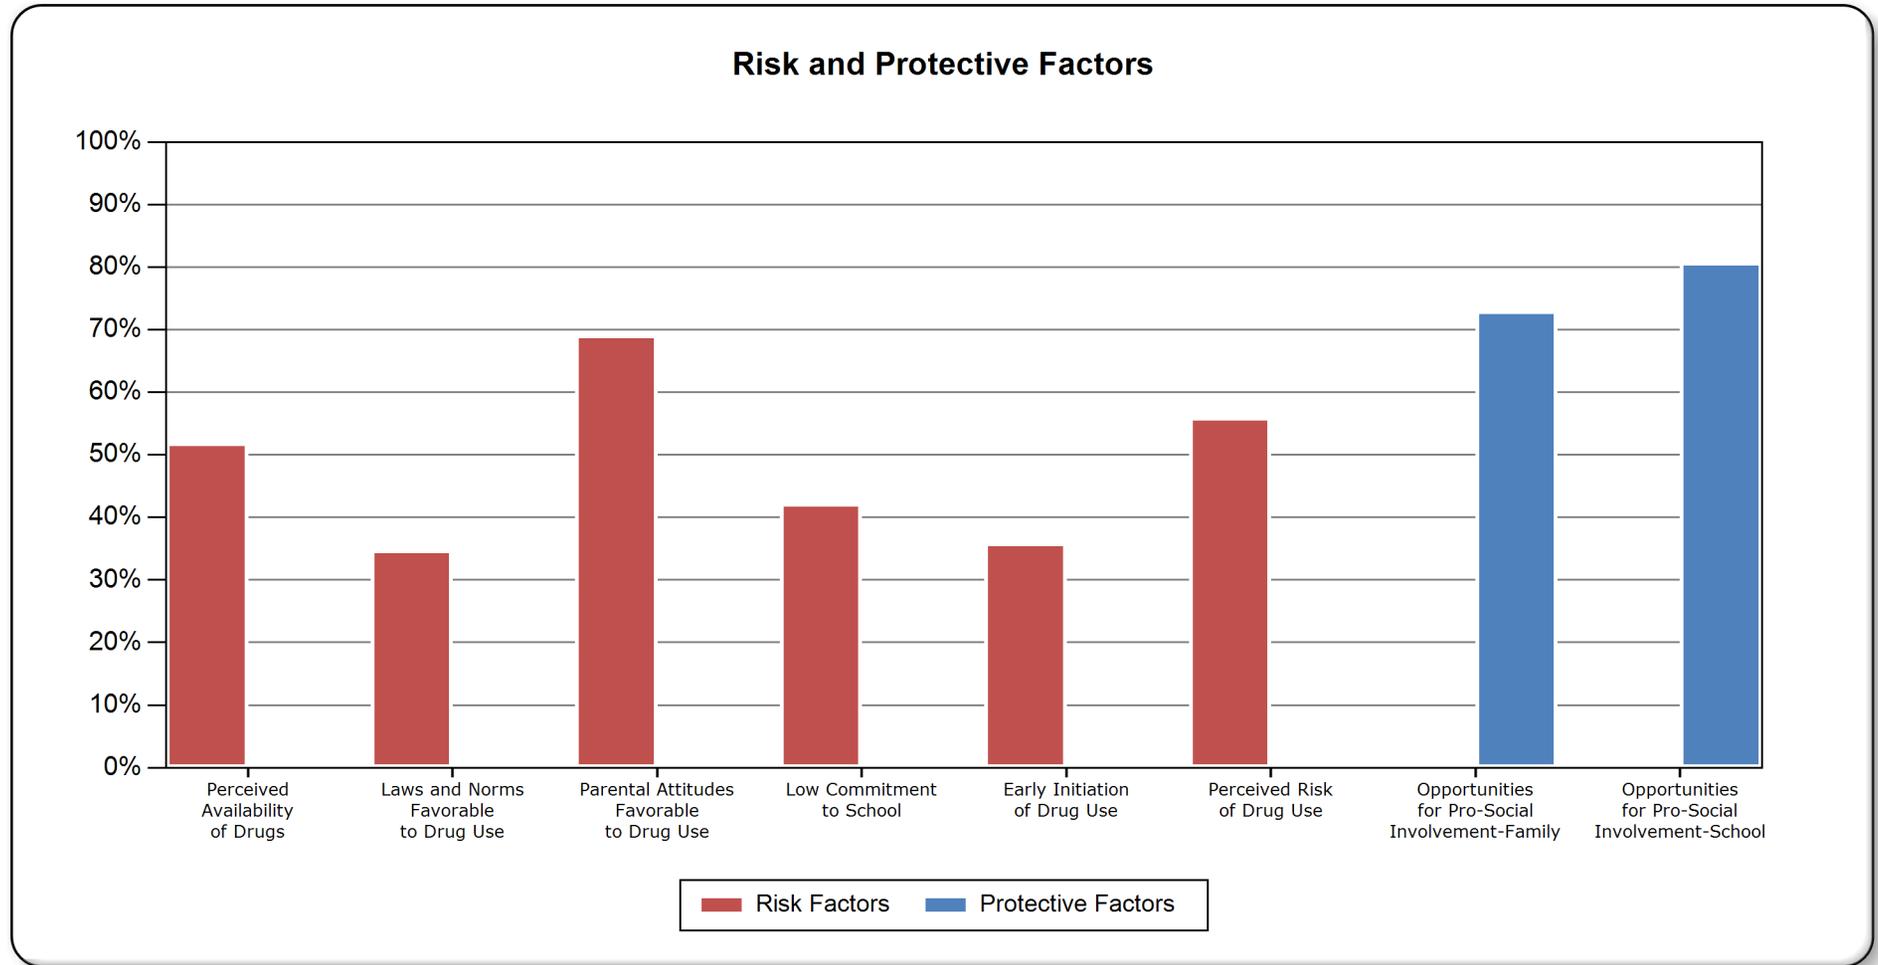

These questions are asked only on the Module A version of the high school survey. Response rates are calculated based only on the number of 9th-12th grade students who participated on this survey.

Risk and Protective Factors

Grade: 10

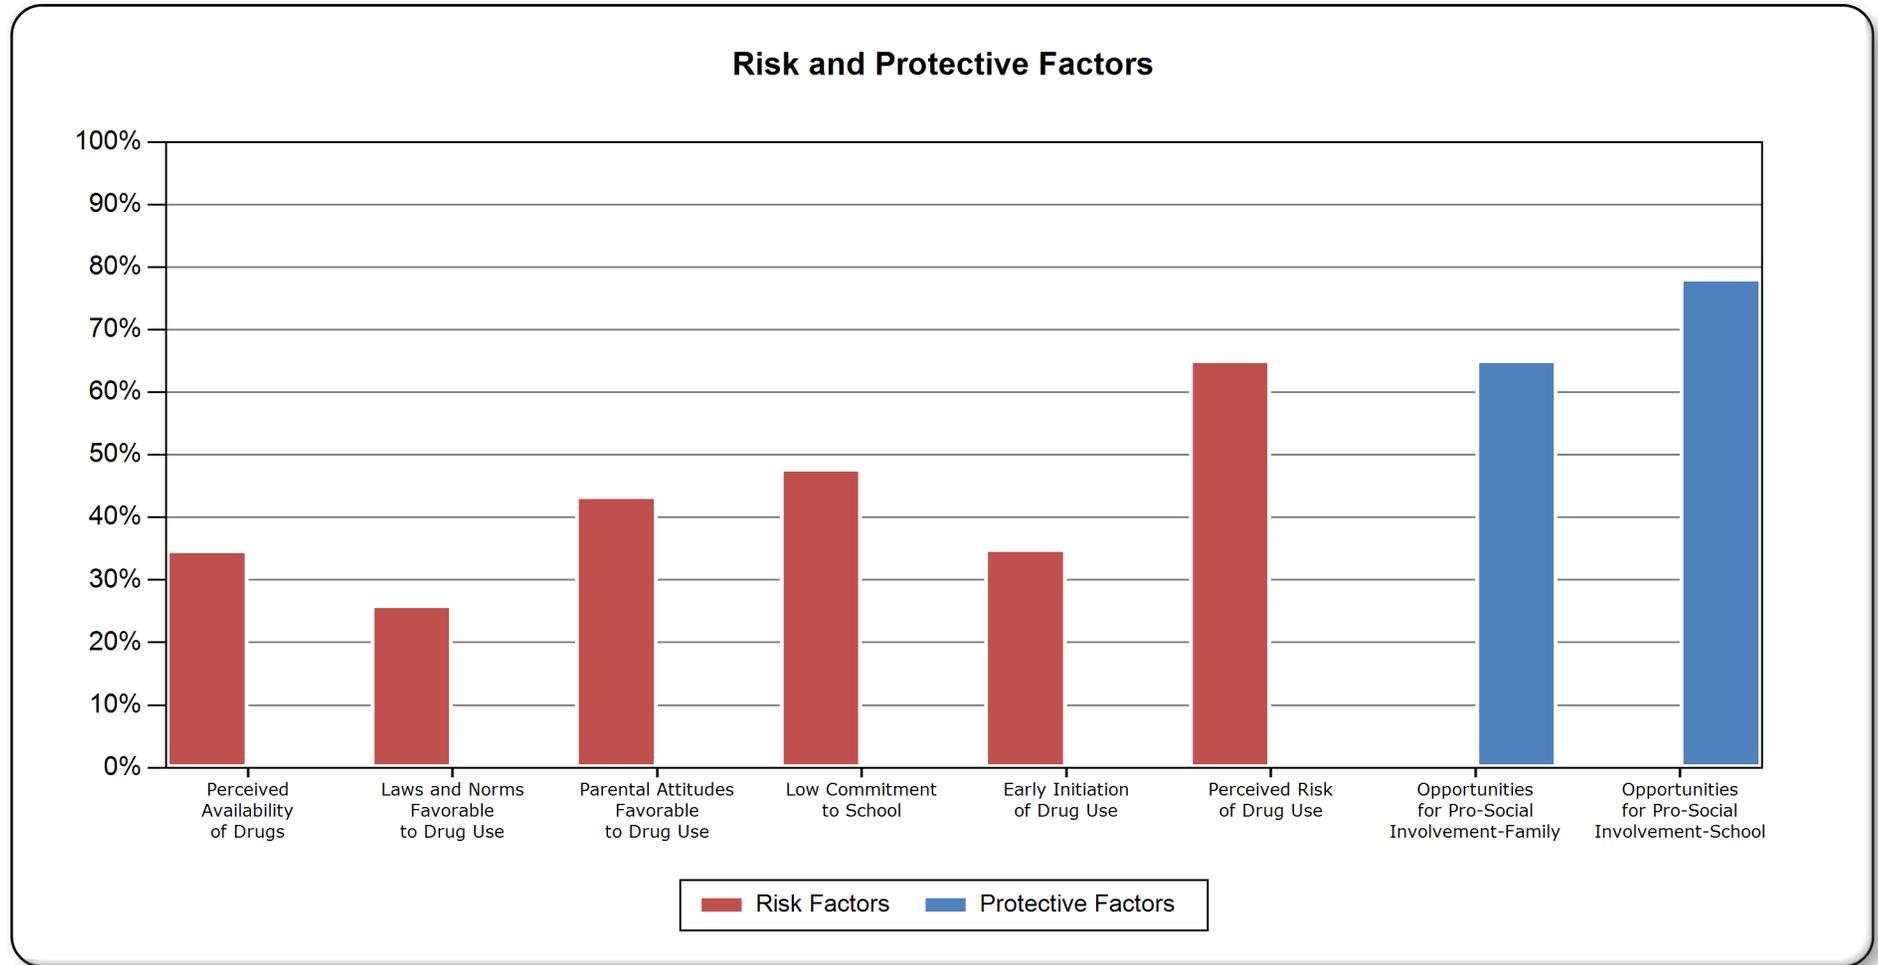

These questions are asked only on the Module A version of the high school survey. Response rates are calculated based only on the number of 9th-12th grade students who participated on this survey.

Risk and Protective Factors

Grade: 11

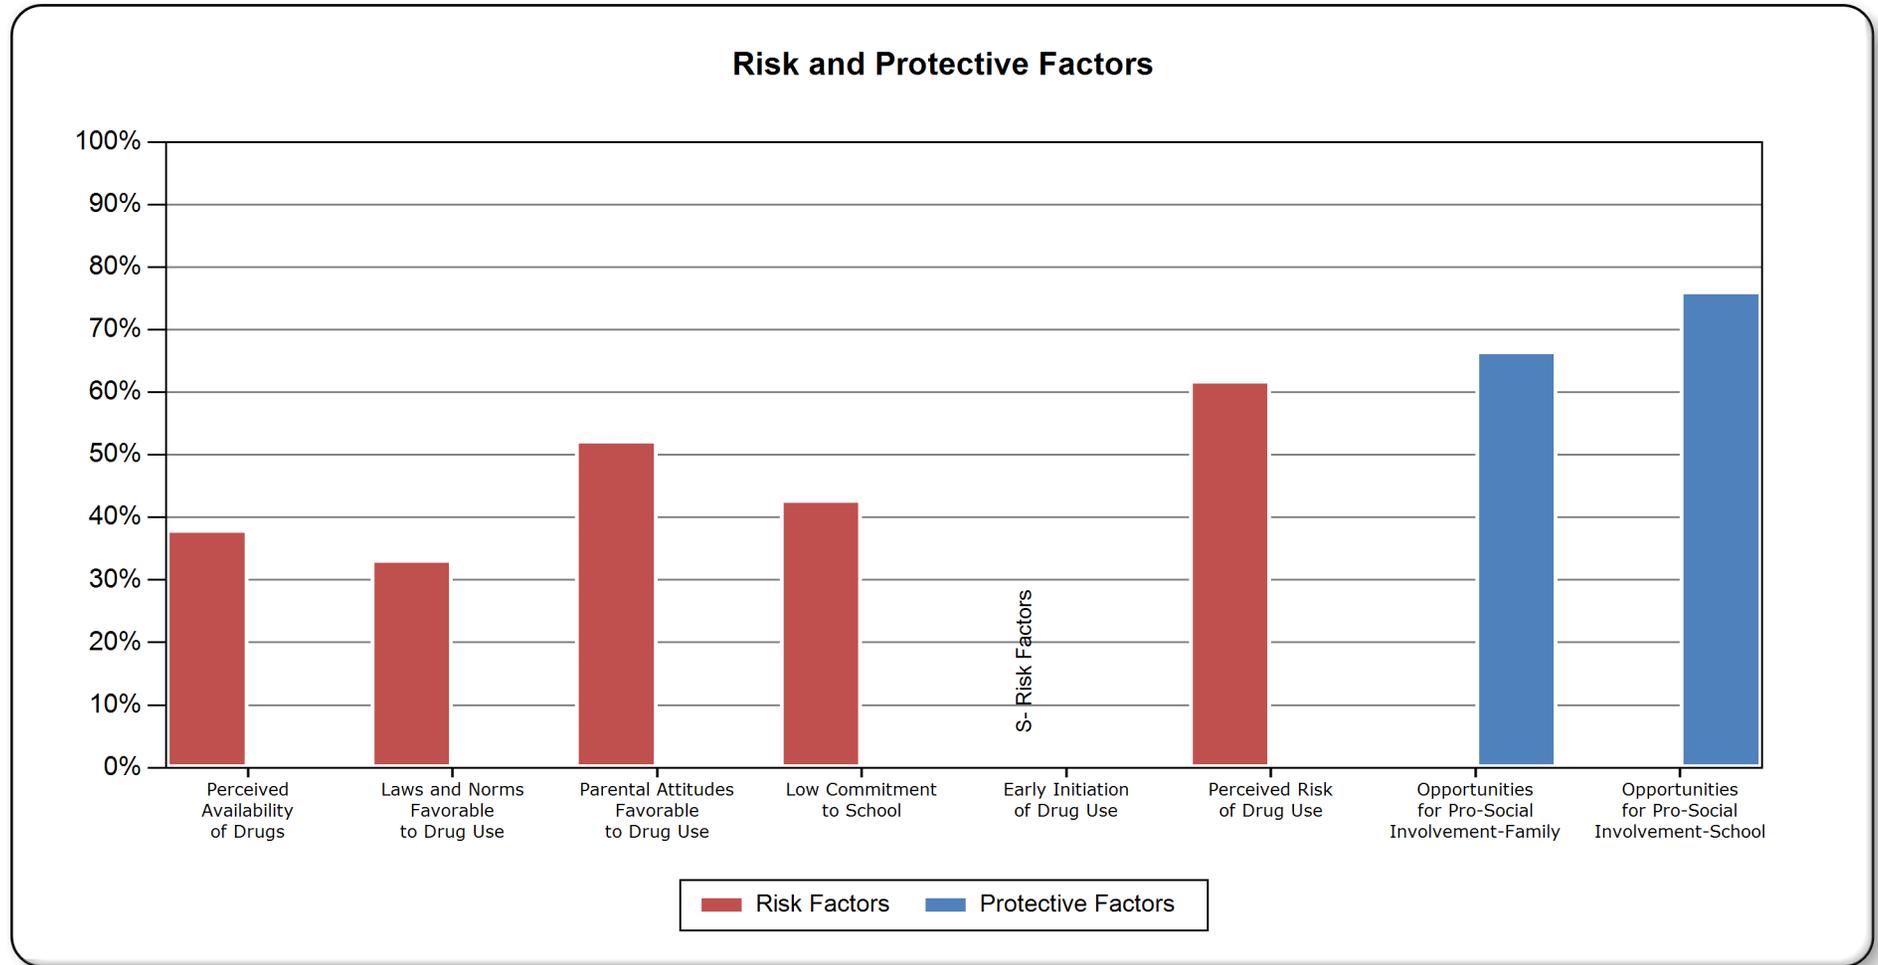

These questions are asked only on the Module A version of the high school survey. Response rates are calculated based only on the number of 9th-12th grade students who participated on this survey.

Risk and Protective Factors

Grade: 12

These questions are asked only on the Module A version of the high school survey. Response rates are calculated based only on the number of 9th-12th grade students who participated on this survey.

Risk and Protective Factors

Section V Appendices

APPENDIX A

FREQUENTLY ASKED QUESTIONS

What is the HKCS?

The Healthy Kids Colorado Survey is a school survey administered statewide that explores many topics about the health related attitudes and behaviors of Colorado students. The HKCS integrates items from two nationally recognized and validated surveys: the Youth Risk Behavior Survey (YRBS) and the Communities that Care Survey, with additional items selected by Colorado state agencies. Specifically, questions on the survey ask about: unintentional injuries and violence, including mental health, school safety and physical fighting; substance use; physical activity and nutrition; sexual behaviors; basic demographic questions; and risk and protective factor questions.

Who participates in the HKCS?

Both middle schools and high schools throughout Colorado voluntarily participate in the HKCS in order to collect school, district and/or community-level data. Results from a local administration of the HKCS can be used to compare to state level data, as well as monitor trends over time in a particular population.

Do the students have to participate?

No. Participation in the HKCS is always voluntary. Parents are notified of the survey ahead of time, and are asked to give permission for their child to participate. Depending on district policy, either active consent (parents opt in to the survey) or passive consent (parents opt out of the survey) is used. Students are also informed that participation in the survey is voluntary and that they may opt out at any time during the administration. In addition, students are reminded that they can skip any questions they do not wish to answer.

How is student confidentiality protected?

Students are asked not to include identifying information on the surveys. Furthermore, teachers are provided with instructions that enhance confidentiality practices such as: not walking around the classroom during administration; having students insert their completed surveys directly into the mailing envelope; and sealing the envelope containing completed surveys in the presence of students before returning the completed surveys to OMNI Institute, which prevents survey tampering. Additionally, data are aggregated across all students who participate, and no individual's data are ever identified.

How is the survey administered?

In most cases, the survey is administered by classroom teachers during regular class periods on a specified day during the school year. A contact person from each school and/or district typically works with survey coordinators at various community based organizations to ensure a successful administration.

How long does the survey take?

The survey administration process takes approximately 45 minutes, and is typically conducted during a single class period. The administration process includes: the distribution of surveys to participating students; providing direction to the students on how to complete the survey; and collecting completed surveys.

Are data representative of the student population?

The more students that participate from a certain grade, school, or district, the more representative the data will be of the population in that grade, school, or district. For example, when the response rate is 80% or greater, one can be *very* confident that the data reflect the experiences of the population being assessed. When the response rate is 60% or greater, one can be *fairly* confident that the data reflect the experiences of the population being assessed. When response rates are below 60%, one can be *less* confident that they accurately represent the experiences of the entire student population, and instead reflect only the students who participated in the survey.

Why does the HKCS ask questions about sensitive topics?

Questions pertaining to sensitive topics are included on the survey because they represent the leading causes of illness, injury, death and social problems among youth in the United States. Having data on current behavior among youth in Colorado can help schools and their surrounding communities provide the resources and education necessary to prevent unhealthy behaviors and promote healthy behaviors.

Why are the questions worded in the way they are?

The structure and wording of the questions are based on extensively researched methodologies that allow data to be collected in a meaningful and valid manner. Questions and response options are constructed to be easily understood by students in order to yield the most accurate response. All questions pertaining to behavior provide a response option for students to report that they have never engaged in the behavior. Additionally, skip patterns are not included on the questionnaire. This technique helps to safeguard privacy because all students are asked to answer all questions. When skip patterns are included, students who engage in many risk behaviors take much longer to complete the survey than students who engage in few risk behaviors. This would violate the privacy of both groups because students and survey administrators could infer that those who take longer to complete the survey are engaging in a larger number of the behaviors assessed on the HKCS. Also, having all students answer all questions reduces the possibility that a student will feel that his or her answer may be undesirable or negative because they are less likely to compare themselves to their peers while they take the survey.

Can answering these questions cause students to engage in negative behaviors?

The causes and determinants of health risk behaviors are very complex. Most students are regularly exposed to information about substance use, violence, and sexuality through the media, their peers, friends, parents and their surrounding community. Responding to a survey with a small number of questions on any of these topics is not likely to cause significant changes in behavior – either good or bad.

Who may receive a HKCS report?

Schools and districts that participate in the HKCS may receive a report(s) without a signed release form as they have ownership over data collected in their school(s). In many cases, a third party such as a community coalition or task force may work with a school and/or district in order to coordinate the survey administration and the reporting of school, district or community level data. In these cases, a school or district official authorized to release data must sign a Report Release Form authorizing OMNI Institute to share school and/or district HKCS summary reports with the recipients listed on the release form. OMNI will not release school or district level reports to entities outside of the school and/or district in which the survey was administered without a signed Report Release Form from the Authorized District/School Official.

For more information, please contact survey@omni.org or visit <http://hkcs.omni.org>.

APPENDIX B

PREVENTION CONTACTS - REGIONAL PREVENTION SERVICES

The Regional Prevention Services Project is a regionally-based system funded by the Office of Behavioral Health of the Colorado Department of Human Services. Regional Prevention Consultants can help you interpret and use your HKCS data. For more information, please visit the RPS website at www.rpscolorado.org or contact the Regional Prevention Consultant (RPC) serving your county as listed below.

Lindsay Moore

OMNI Institute
899 Logan St., Suite 600
Denver, CO 80203
303-839-9422 or 800-279-2070 x148
303-839-9420 (fax)
lmoore@omni.org

Serving Counties Weld, Larimer, Morgan, Logan, Sedgwick, Phillips, Washington, Yuma, Elbert, Lincoln, Kit Carson, and Cheyenne

Mandy McCullen

OMNI Institute
899 Logan St., Suite 600
Denver, CO 80203
303-839-9422 or 800-279-2070 x128
303-839-9420 (fax)
mmcullen@omni.org

Serving Counties Boulder, Gilpin, Clear Creek, Jefferson, Douglas, Arapahoe, Adams, and Denver

Julie Reid

P.O. Box 702
Woodland Park,
Colorado 80863
719-687-2377
719-213-9653 (cell)
jreid@omni.org

Serving Counties Teller, El Paso, Park, Lake, Fremont, Custer, Pueblo, Huerfano, Las Animas, Crowley, Bent, Otero, Kiowa, Prowers, and Baca

Rebecca Larson

2800 Road T
Dolores, CO 81323
970-882-1269 (x 3#)
970-882-2217 (fax)
rlarson@omni.org

Serving Counties Montezuma, Dolores, Ouray, and San Miguel

Project Manager
Jere Thomas, LCSW
719-207-0678
jthomas@omni.org
Serving Chaffee County

Anna Royer

PO Box 3274
Durango, CO 81302
800/279-2070 x165
aroyer@omni.org

Serving Counties San Juan, La Plata, Archuleta, Mineral, Rio Grande, Conejos, Costilla, Alamosa, and Saguache

Misty Schulze

439 Breeze St., Suite 103
Craig, CO 81625
970-824-5379
970-629-2568 (cell)
mschulze@omni.org

Serving Counties Summit, Routt, Grand, Eagle, Pitkin, Garfield, Moffat, Hinsdale, Gunnison, Delta, Montrose, Rio Blanco, Mesa, and Jackson

**APPENDIX C
RISK AND PROTECTIVE FACTOR SCALE DESCRIPTIONS AND SIGNIFICANCE**

Community Domain	
<i>Risk Factors</i>	
Perceived Availability of Drugs	Youth report that it would be easy for them to obtain cigarettes, alcohol, marijuana, or other illegal drugs. Perceived availability of drugs is a primary factor associated with greater risk of adolescent substance use.
Laws and Norms Favorable to Drug Use	Youth report that laws regulating alcohol and other drug sales and use are poorly enforced. Further, youth perceive that adults communicate that it is acceptable for minors to use alcohol or other drugs. Research has demonstrated that in communities where drug use is explicitly or implicitly condoned, youth are more likely to engage in drug use and other antisocial behavior.

Family Domain	
<i>Risk Factors</i>	
Parental Attitudes Favorable to Drug Use	Parents are tolerant of their youth’s alcohol or drug use. In families where parents use illegal drugs, are heavy users of alcohol, or condone youths’ use, youth are more likely to become drug abusers during adolescence. The risk is further increased if parents involve youth in their own drug (or alcohol) using behavior, for example, asking the youth to light the parent’s cigarette or get a beer from the refrigerator.
<i>Protective Factors</i>	
Opportunities for Pro-Social Involvement	Opportunities are present for children and youth to participate meaningfully in the responsibilities and activities of the family. Research has shown that youth who are involved in family decision-making engage in lower rates of delinquent behavior and substance use.

School Domain	
<i>Risk Factors</i>	
Low Commitment	Youth report poor grades and that they are not keeping up with other students academically. Factors such as liking school, spending time on homework, perceiving the coursework as relevant, and expecting to attend college are associated with lower rates of drug use.
<i>Protective Factors</i>	
Opportunities for Pro-Social Involvement	Opportunities are available for youth to participate meaningfully in their classroom and school. When young people are given more opportunities for pro-social involvement, they are less likely to engage in drug use and other negative outcomes.

Peer-Individual	
<i>Risk Factors</i>	
Early Initiation of Drug Use	Youth report that they first used alcohol and other drugs at an early age (prior to the age of 15). Research shows that the early incidence of drug use also predicts greater involvement in later drug use and abuse, as well as antisocial behavior.
Perceived Risk of Drug Use	Youth report that alcohol and drug use is not likely to cause people harm. A low perception of harm associated with drug use can make it more likely that youth will engage in drug use.

APPENDIX C

RISK AND PROTECTIVE FACTOR ITEMS

DOMAIN: COMMUNITY

Risk Factors

Perceived Availability of Drugs

This scale assesses the degree to which respondents find it easy to obtain alcohol or other substances.

Survey Questions:

- If you wanted to get some beer, wine or hard liquor, how easy would it be for you to get some?
- If you wanted to get some cigarettes, how easy would it be for you to get some?
- If you wanted to get some marijuana, how easy would it be for you to get some?
- If you wanted to get a drug like cocaine, LSD, amphetamines, or any other illegal drug, how easy would it be for you to get some?

Laws and Norms Favorable to Drug Use*

This scale assesses the degree to which respondents find it easy to obtain alcohol or other substances.

Survey Questions:

- If a kid drank alcohol in your neighborhood, or the area around where you live, would he or she be caught by the police?
- If a kid used marijuana in your neighborhood, or the area around where you live, would he or she be caught by the police?
- How wrong would most adults in your neighborhood, or the area around where you live, think it is for kids your age to drink alcohol?
- How wrong would most adults in your neighborhood, or the area around where you live, think it is for kids your age to smoke cigarettes?
- **How wrong would most adults in your neighborhood, or the area around where you live, think it is for kids your age to use marijuana?

*Two questions from the CTC version of this scale are not included in this survey (“if a kid carried a handgun in your neighborhood, would he or she be caught by the police?” and “If a kid smoked a cigarette in your neighborhood, would he or she be caught by the police?”); the scale is calculated with five items.

**This question from the CTC version of this scale states “smoke marijuana”.

DOMAIN: FAMILY**Risk Factors*****Parental Attitudes Favorable to Drug Use***

This scale assesses the degree to which respondents report their parents would feel it is wrong if they (the respondents) drink liquor, smoke marijuana, or smoke cigarettes.

Survey Questions:

- How wrong do your parents or guardians feel it would be for you to drink alcohol regularly (at least once or twice a month)?
- How wrong do your parents or guardians feel it would be for you to smoke cigarettes?
- **How wrong do your parents or guardians feel it would be for you to use marijuana?

**This question from the CTC version of this scale states “smoke marijuana”.

Protective Factors***Opportunities for Pro-Social Involvement***

This scale assesses the degree to which respondents report that they have opportunities to participate in family decision making and family activities.

Survey Questions:

- If I had a personal problem, I could ask my parents or guardians for help.
- My parents or guardians ask me what I think before most family decisions affecting me are made.
- My parents or guardians give me lots of chances to do fun things with them.

DOMAIN: SCHOOL**Risk Factors*****Low Commitment to School***

This scale assesses the degree to which students find school and homework interesting and important.

Survey Questions:

- How often do you feel that the school work you are assigned is meaningful and important?
- How interesting are most of your courses to you?
- How important do you think the things you are learning in school are going to be for you later in life?
- Now thinking back over the past year in school, how often did you try to do your best work in school?
- Now thinking back over the past year in school, how often did you enjoy being in school?
- Now thinking back over the past year in school, how often did you hate being in school?
- During the LAST FOUR WEEKS how many whole days of school have you missed because you skipped or “cut”?

Protective Factors***Opportunities for Pro-Social Involvement***

This scale assesses the degree to which respondents feel that they can interact with teachers and can participate in school-related activities.

Survey Questions:

- In my school, students have lots of chances to help decide things like class activities and rules.
- Teachers ask me to work on special classroom projects.
- There are a lot of chances for students in my school to get involved in sports, clubs, and other school activities outside of class.
- There are lots of chances for students in my school to talk with a teacher one-on-one.
- There are lots of chances to be part of class discussions or activities.

DOMAIN: PEER/INDIVIDUAL**Risk Factors******Early Initiation of Drug Use:***

This scale assesses the age at which respondents report first drinking alcohol and trying other substances.

Survey Questions:

- How old were you when you had your first drink of alcohol other than a few sips?
- How old were you when you first began drinking alcohol regularly, that is, at least once or twice a month?
- ** How old were you when you smoked a whole cigarette for the first time?
- ***How old were you when you tried marijuana for the first time?

*The scale responses have been slightly modified from the original CTC version of the survey.

**This question from the CTC version of this scale states "smoked a cigarette, even just a puff".

***This question from the CTC version of this scale states "How old were you when you first smoked marijuana?".

Perceived Risk of Drug Use

This scale assesses the degree to which youth perceive the use of tobacco, alcohol, and marijuana to be harmful.

Survey Questions:

- How much do you think people risk harming themselves (physically or in other ways) if they smoke one or more packs of cigarettes per day?
- How much do you think people risk harming themselves (physically or in other ways) if they have one or two drinks of alcohol nearly every day?
- How much do you think people risk harming themselves (physically or in other ways) if they use marijuana once or twice?
- How much do you think people risk harming themselves (physically or in other ways) if they use marijuana regularly?
